Option 1: Asynchronized Initiation Without Preview

The image shows a Linux desktop interface with several open windows. At the top, there are four terminal windows titled 'CSSH [0]', 'CSSH: ve36', 'CSSH: ve37', and 'CSSH: ve38'. Each terminal window displays a welcome message from Ubuntu 12.04.4 LTS, documentation links, and a command history for navigating to a directory named 'CaptureDual/Desktop/Release/'. Below these, there are two more terminal windows titled 'CSSH: ve39' and 'CSSH: ve40', which show similar logins and directory navigation. In the bottom left corner, there is a window titled 'CaptureFileViewer' containing a list of files: 'data.txt', 'data1HD.txt', 'data2HD.txt', 'dataVGA.txt', 'hanbyul4.txt', and 'lei.txt'. The desktop background is a gradient from purple to orange.

```

Frame 0

Timestamped frames allow
a posteriori time alignment

Better capture software may provide conveniences (e.g., preview)

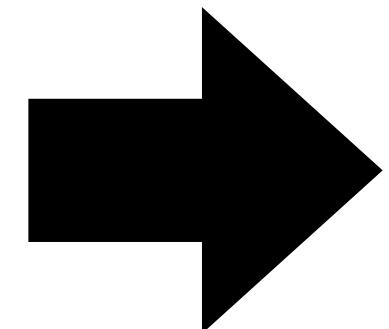

Data/Storage

Data / Storage

Why Do We Need To Consider This?

We would prefer,

- Higher resolution
- Higher frame rate
- More viewpoints

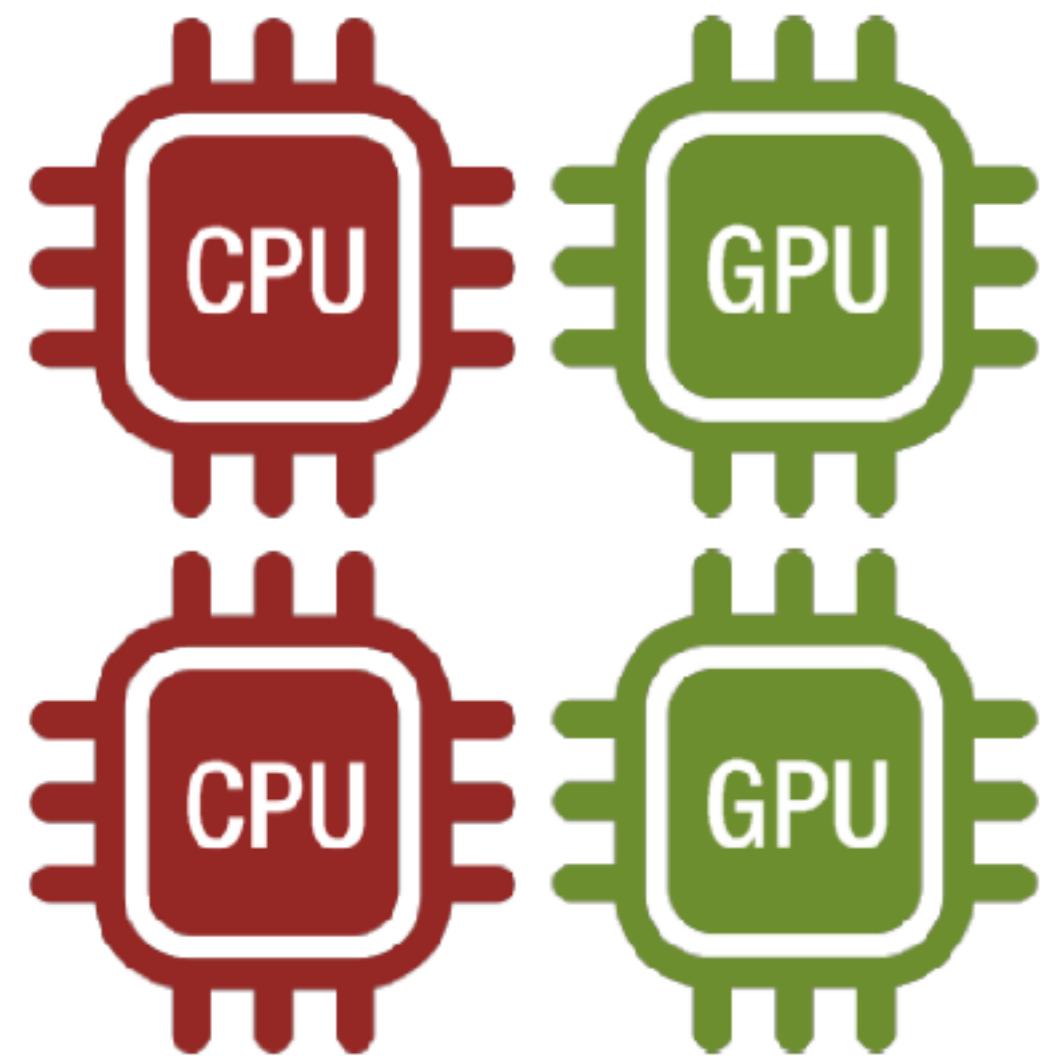

- Large size
- Hard to save

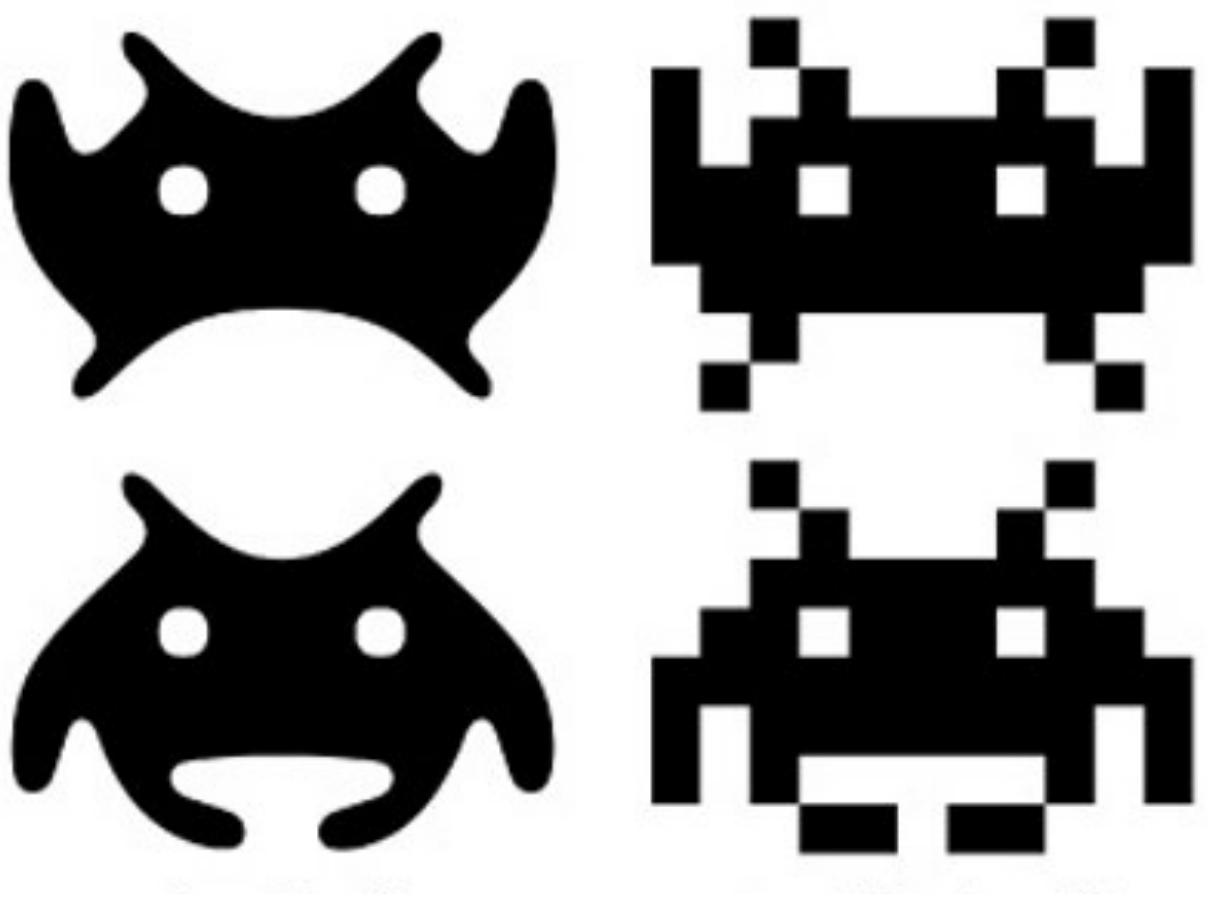

In Panoptic Studio,
 $8.85 \text{ GB/sec} = 531 \text{ GB/min}$

Data / Storage

Options?

- Do not save images
- Real-time system

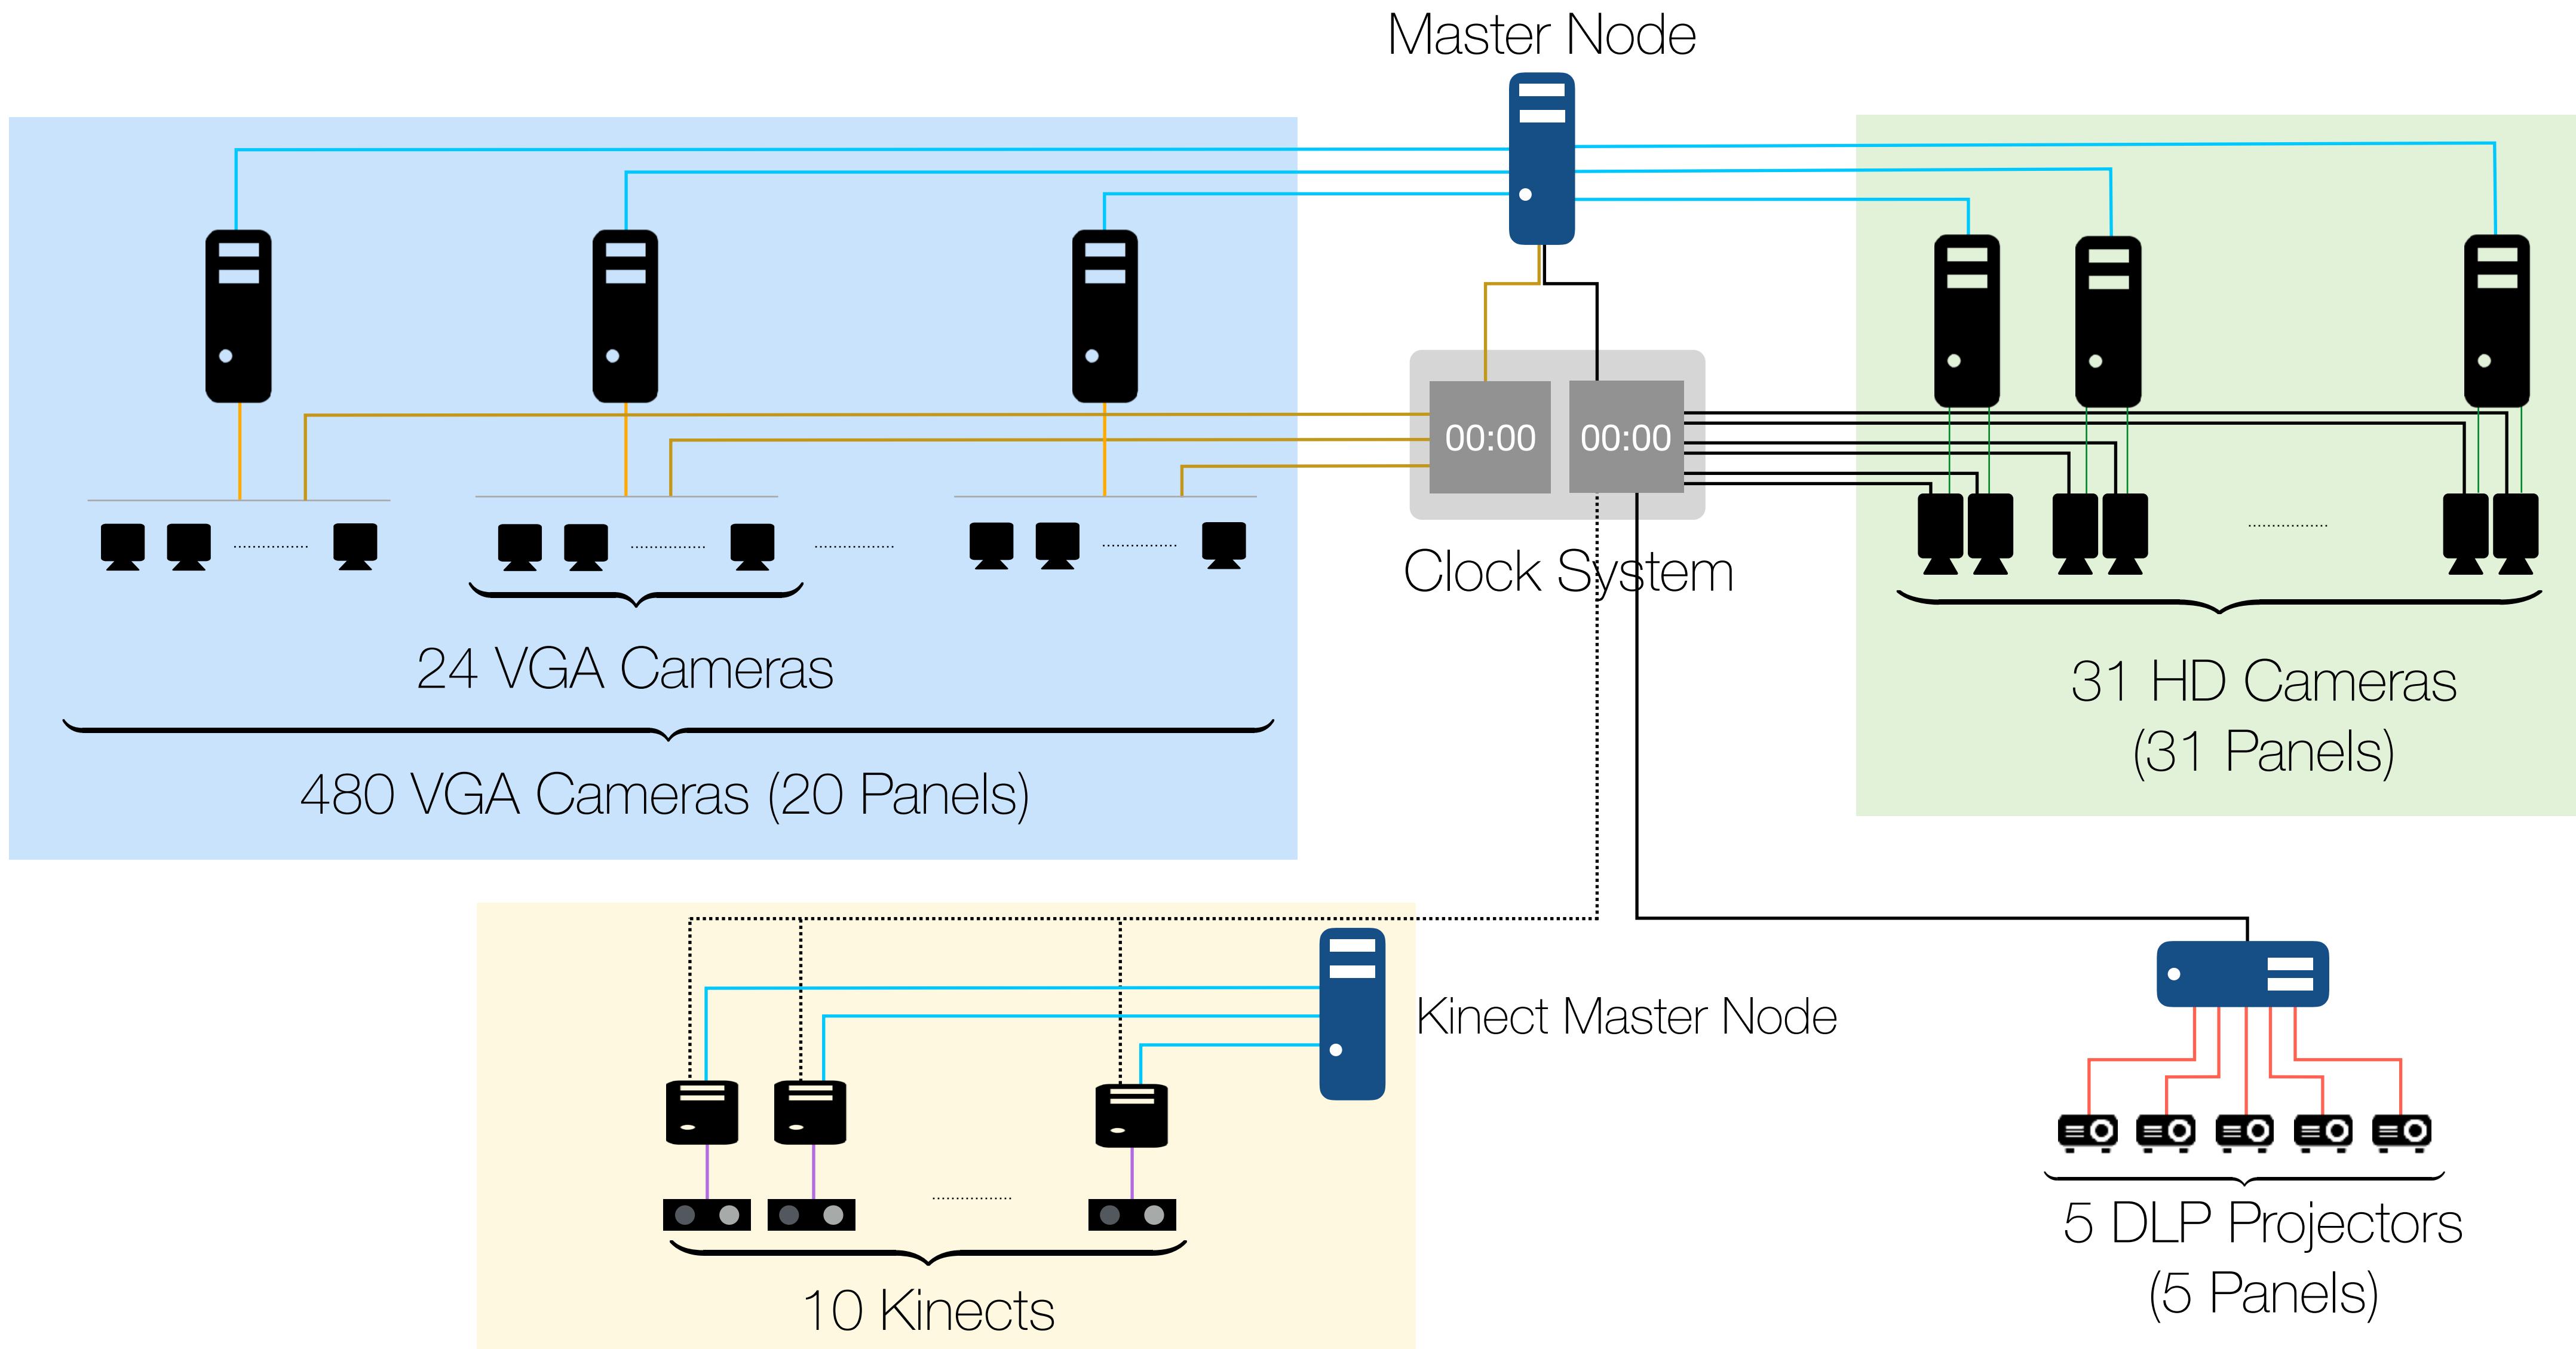

- Save compressed data

- Save raw data

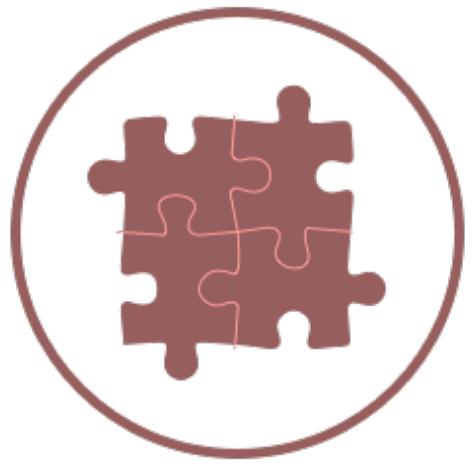

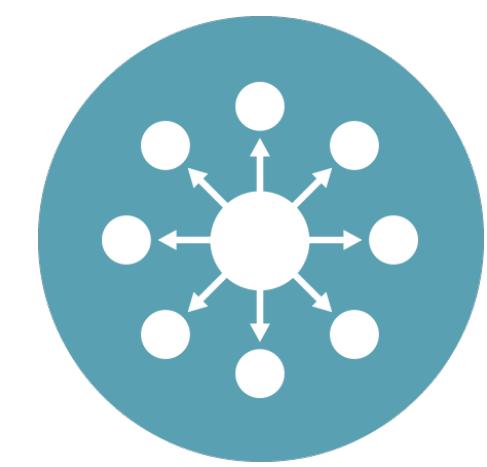

Data / Storage

Our Solution

Data / Storage

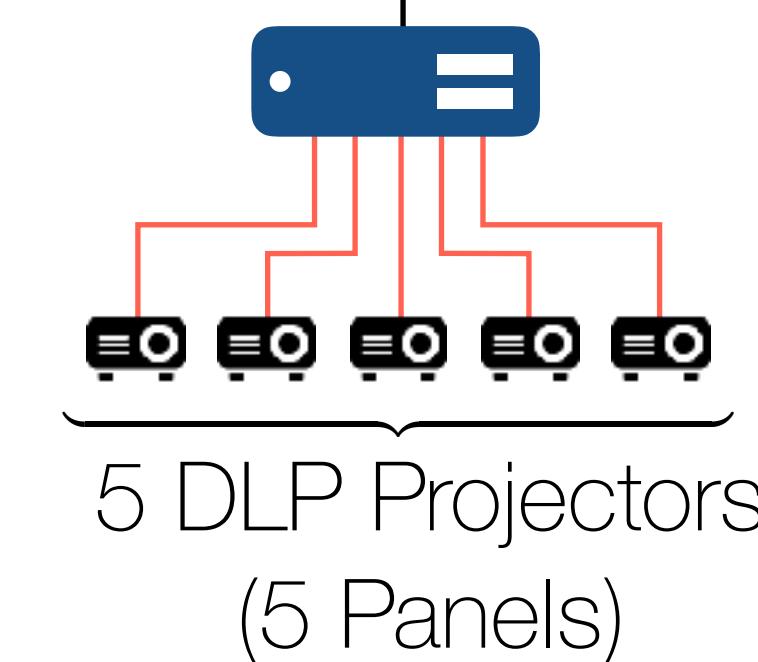

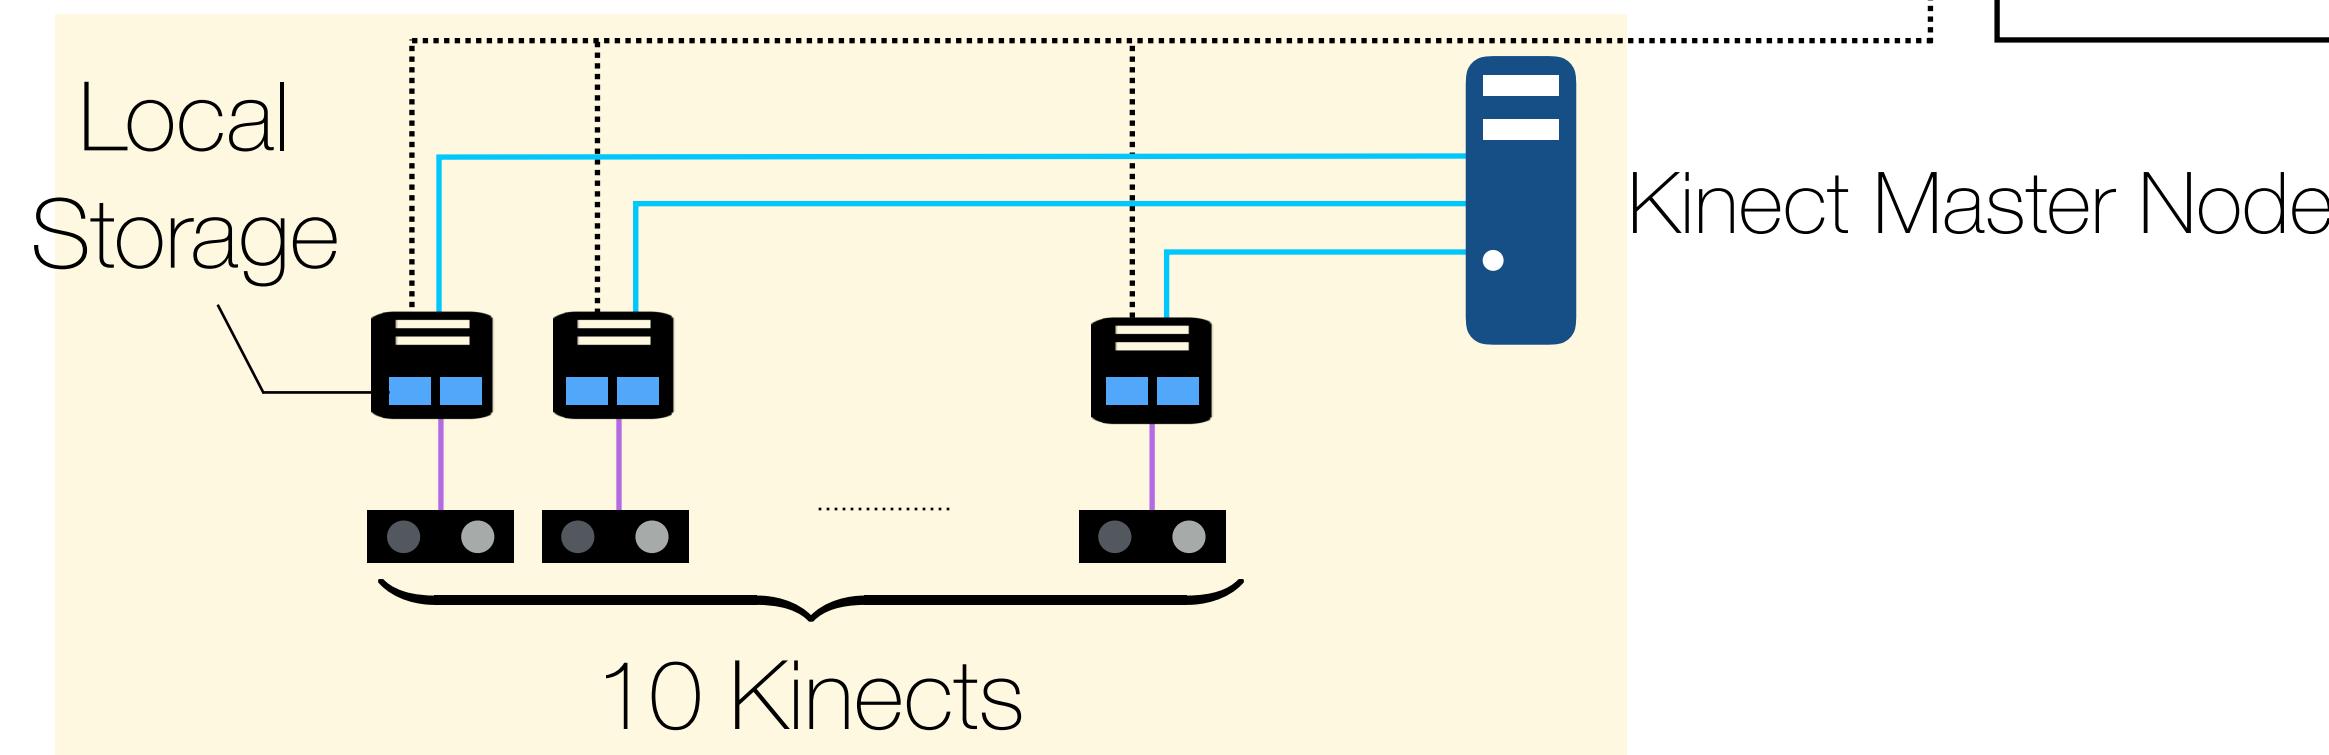

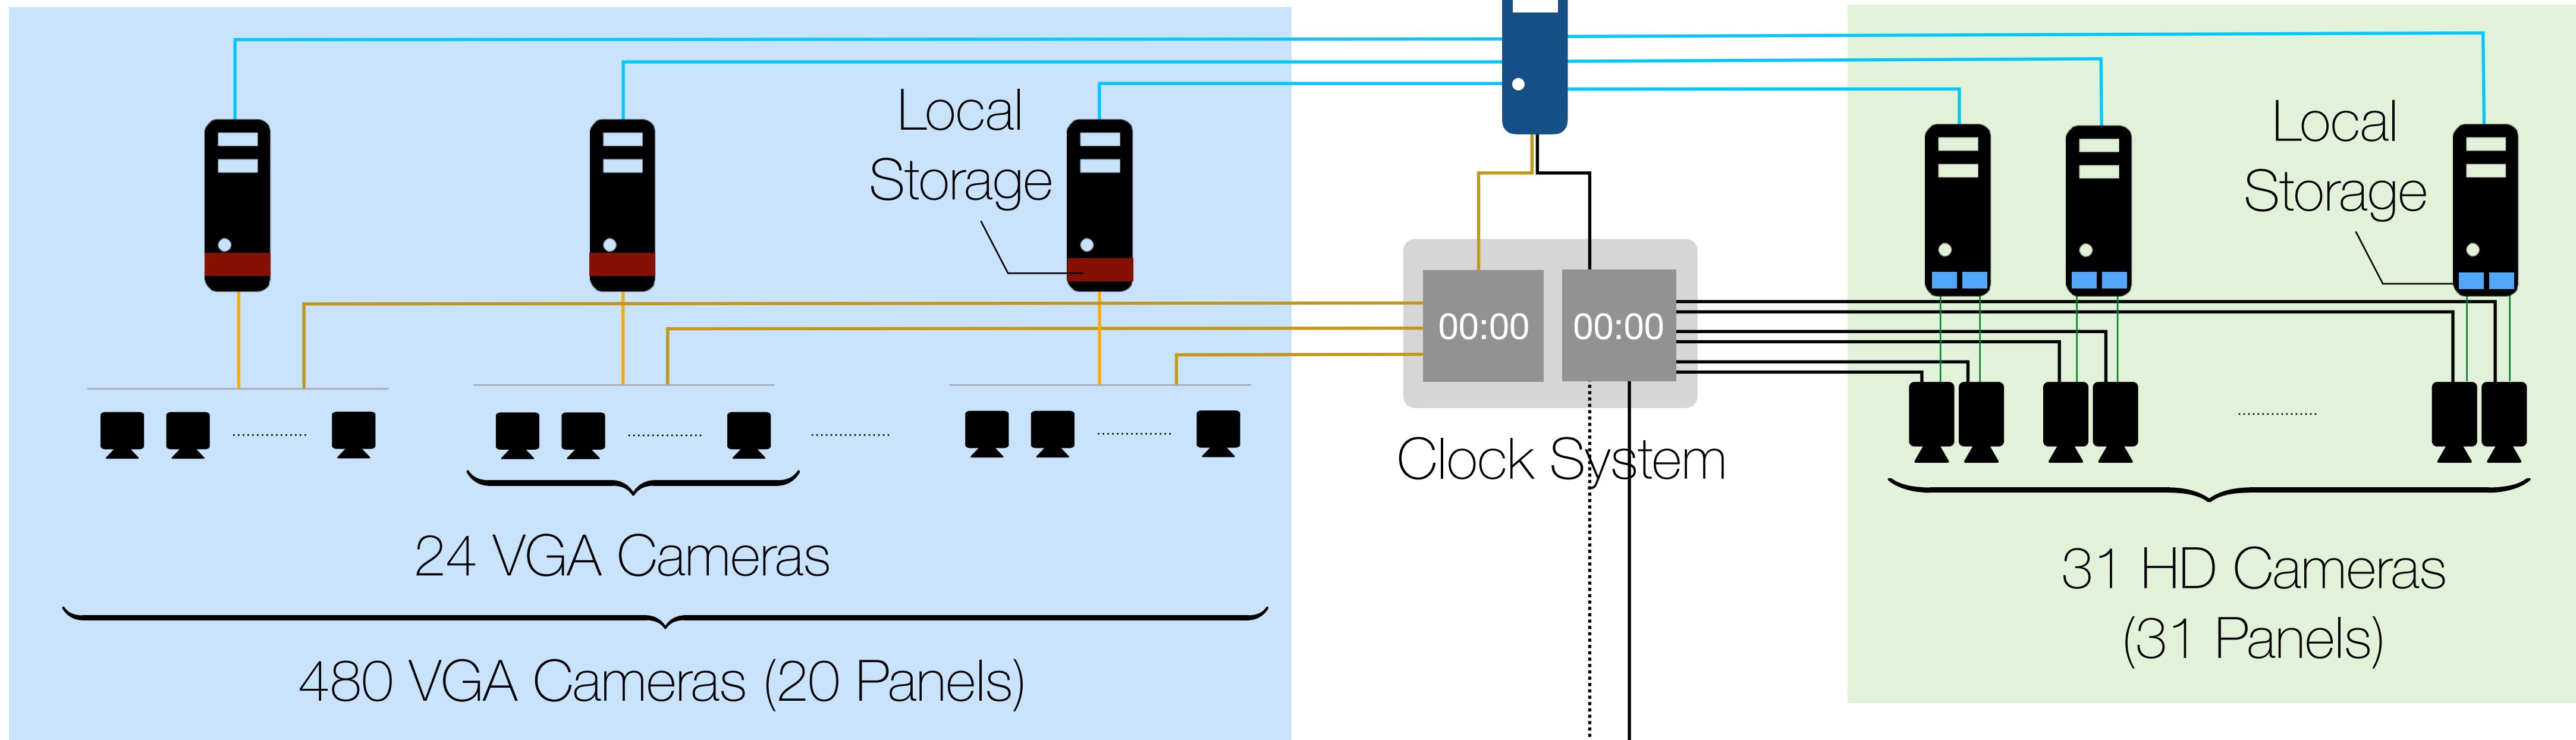

Our Solution: Local Storage Systems

Master Node

Scalability

Diversity

Data / Storage

How Big Is The Panoptic Studio Data?

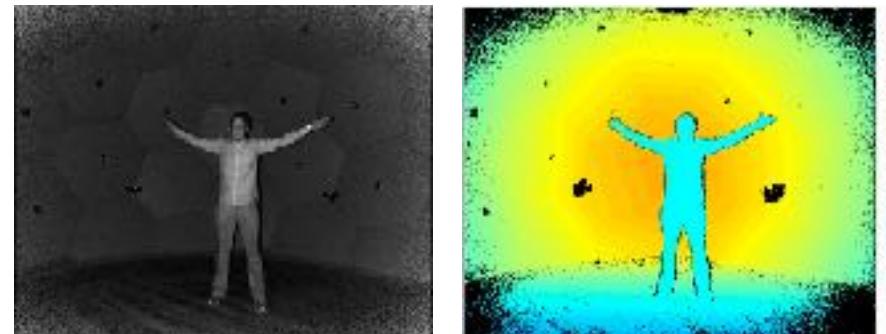

VGA (24 cameras): **184 MB/s** × 20
640 x 480 x 1 Byte/pixel × 24 cameras × 25 frame/sec

HD: **120 MB/s** × 31
1920x1080 x 2 Byte/pixel × 30 frames/sec

Kinect: **145 MB/s** × 10
1920 x 1080 x 2 Byte/pixel × 30 fps
+ depth 512 x 424 x 2 Byte/pixel × 30 fps (12.4 MB/s)
+ IR 512 x 424 x 2 Byte/pixel × 30 fps (12.4 MB/s)
+ body keypoints, audio

Note: average HDD's writing speed: **80-160 MB/s**

Data / Storage

How Big Is The Panoptic Studio Data?

VGA (24 cameras): **184 MB/s** \times 20
 $640 \times 480 \times 1 \text{ Byte/pixel} \times 24 \text{ cameras} \times 25 \text{ frame/sec}$

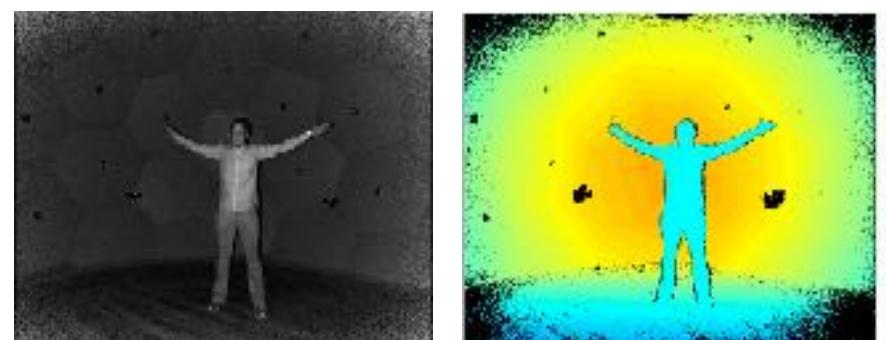

Why not SSD? ⏰ 💰
SSD (1TB) can capture 90 minutes

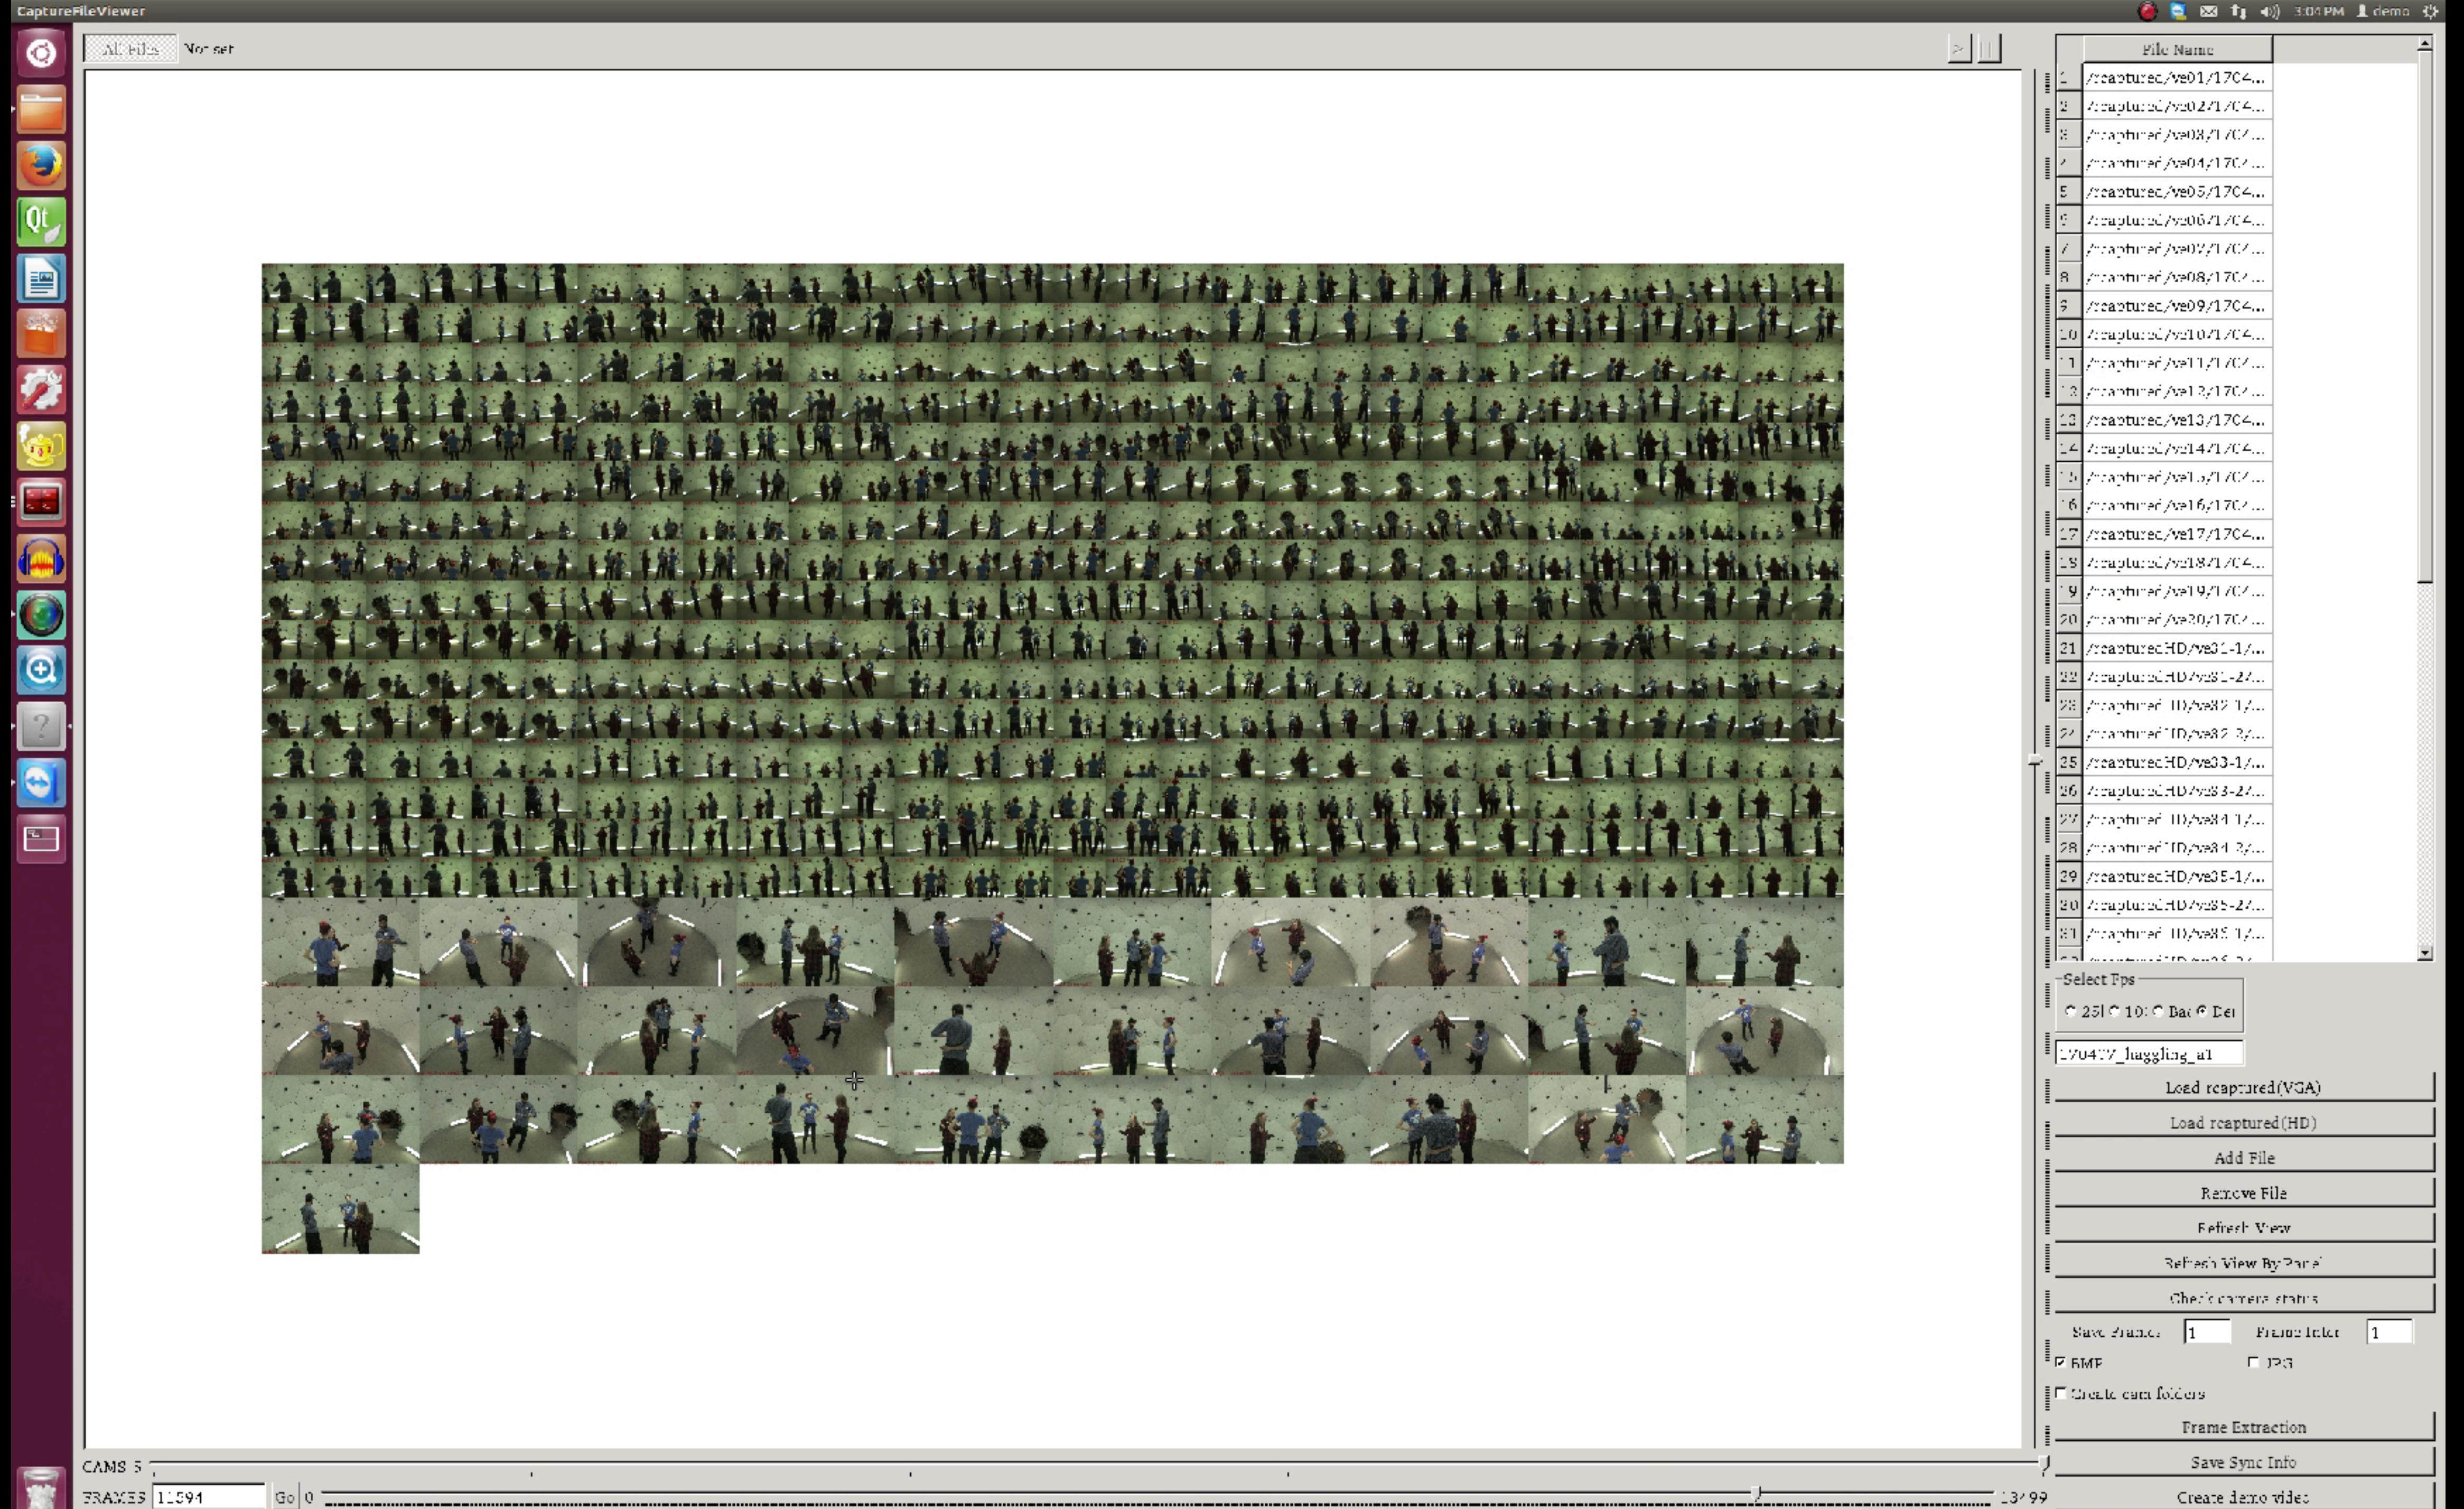

HD: **120 MB/s** \times 31
 $1920 \times 1080 \times 2 \text{ Byte/pixel} \times 30 \text{ frames/sec}$

Kinect: **145 MB/s** \times 10
 $1920 \times 1080 \times 2 \text{ Byte/pixel} \times 30 \text{ fps}$
+ depth $512 \times 424 \times 2 \text{ Byte/pixel} \times 30 \text{ fps}$ (12.4 MB/s)
+ IR $512 \times 424 \times 2 \text{ Byte/pixel} \times 30 \text{ fps}$ (12.4 MB/s)
+ body keypoints, audio

Note: average HDD's writing speed: **80-160 MB/s**

Storage System

Long-Term Storage

- NAS 12 x 8TB (Synology)
- 1 NAS: 88 TB (with RAID5) = 166 minutes
- \$29 / min
 $\$1,700 + \$260 \times 12 = \$4,820 / 166 \text{ min}$
- Currently Panoptic Studio has about 1 PB data

A Planar Pattern To Calibrate Panoptic Studio?

Accuracy

Scalability

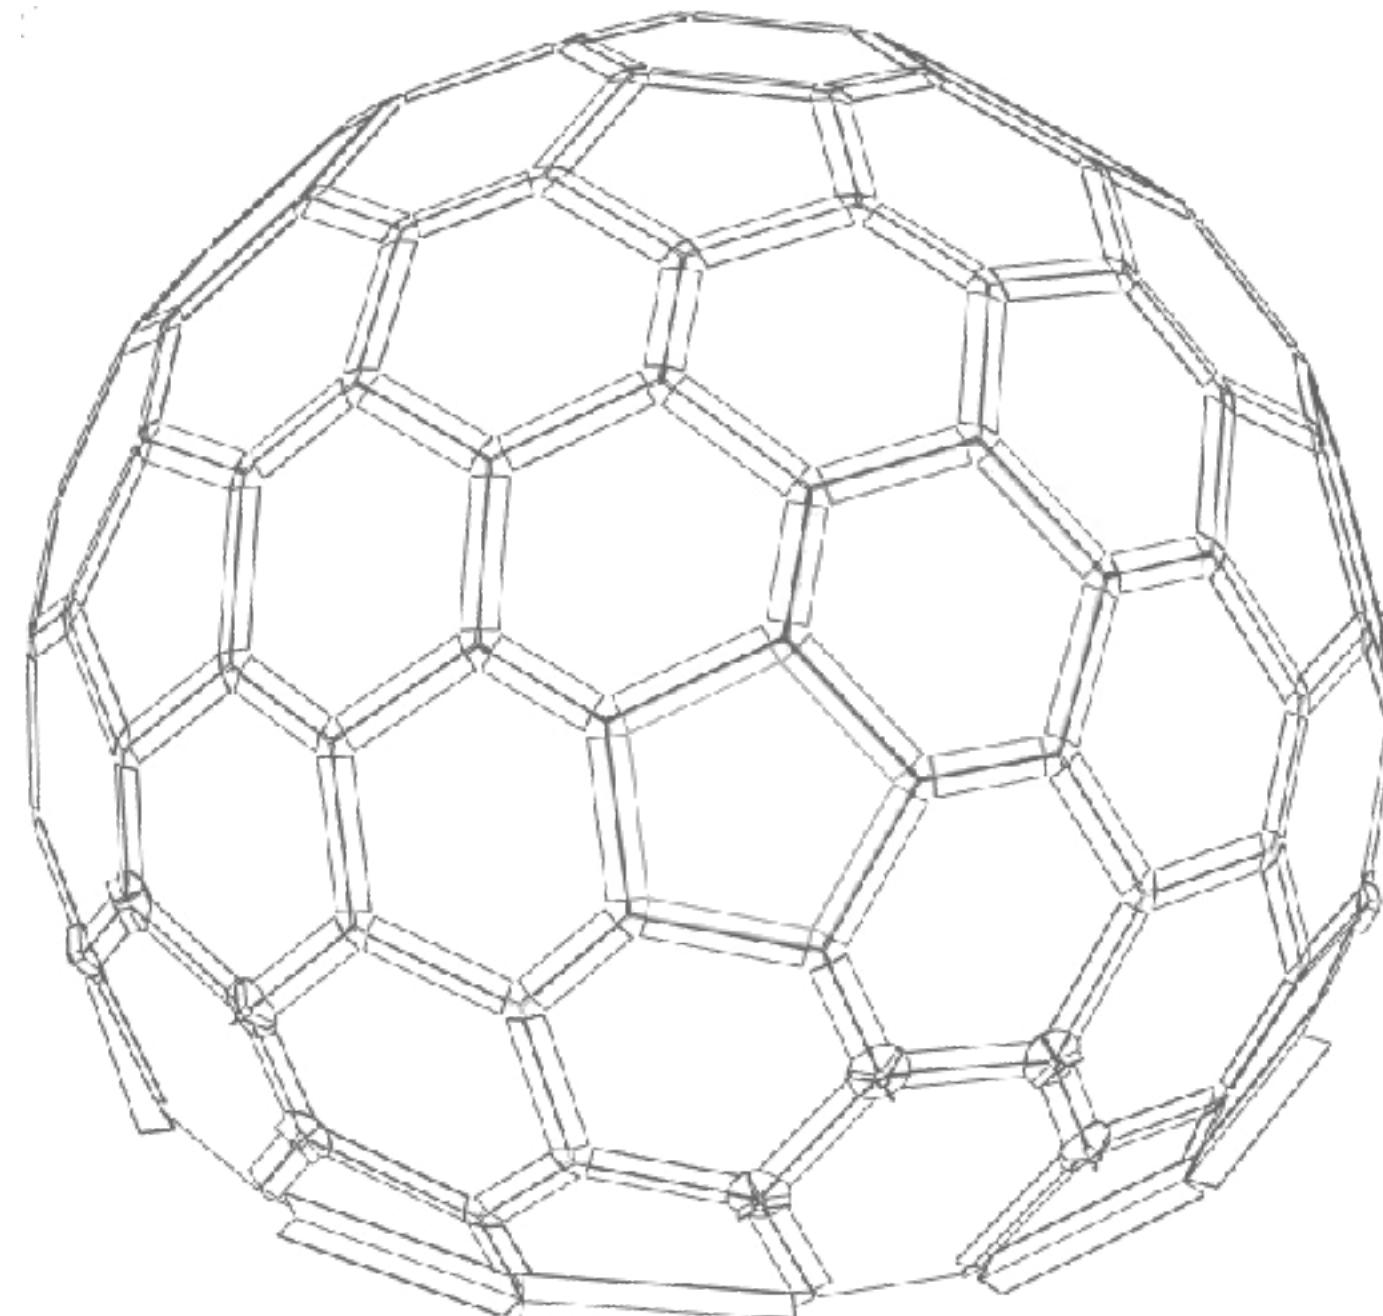

Diversity

- Good accuracy
- Need to cover many locations
- Problem for sensors with different frame rates
(VGA 25fps, HD 30fps, Kinects 30fps)

Our Solution For Camera Calibration

How To Calibrate Panoptic Studio Cameras

- **Different types of cameras**

- No perfect sync among different types
- Pattern should be stationary

- **A large working volume**

- Pattern should cover as much space as possible

- **500+ cameras**

- Fully automatic method is needed
- Avoid any image selections

Based on Structure from Motion (SfM)

Calibration Pipeline

Based on Structure from Motion (SfM)

Panoptic Studio Camera Calibration

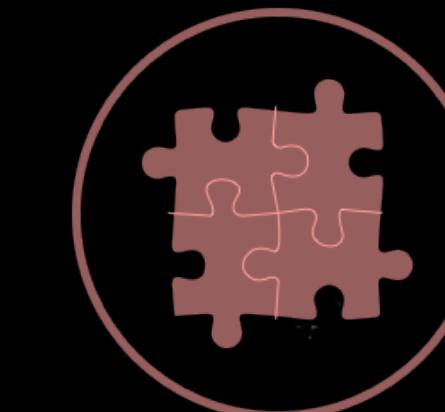

Discussion

- Less accurate keypoint localization
- Scale factor is missing

- 5 minutes for capture
- Fully automatic process

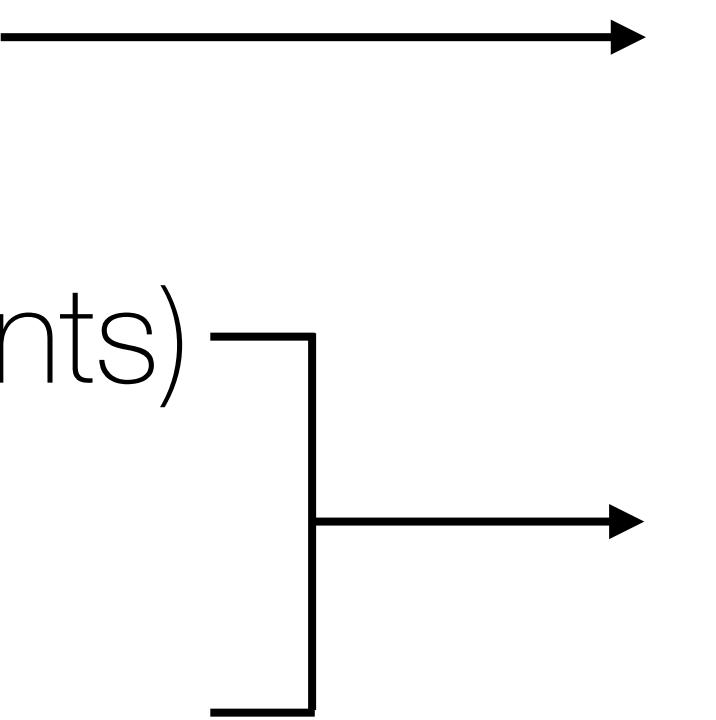

- Applicable for different types of sensors (except Kinect depth)

Camera Calibration

Take Home Messages

Three Basic Steps for Calibration:

- Identify & match correspondences
- Initialization (camera matrices and 3D points)
- Bundle adjustment

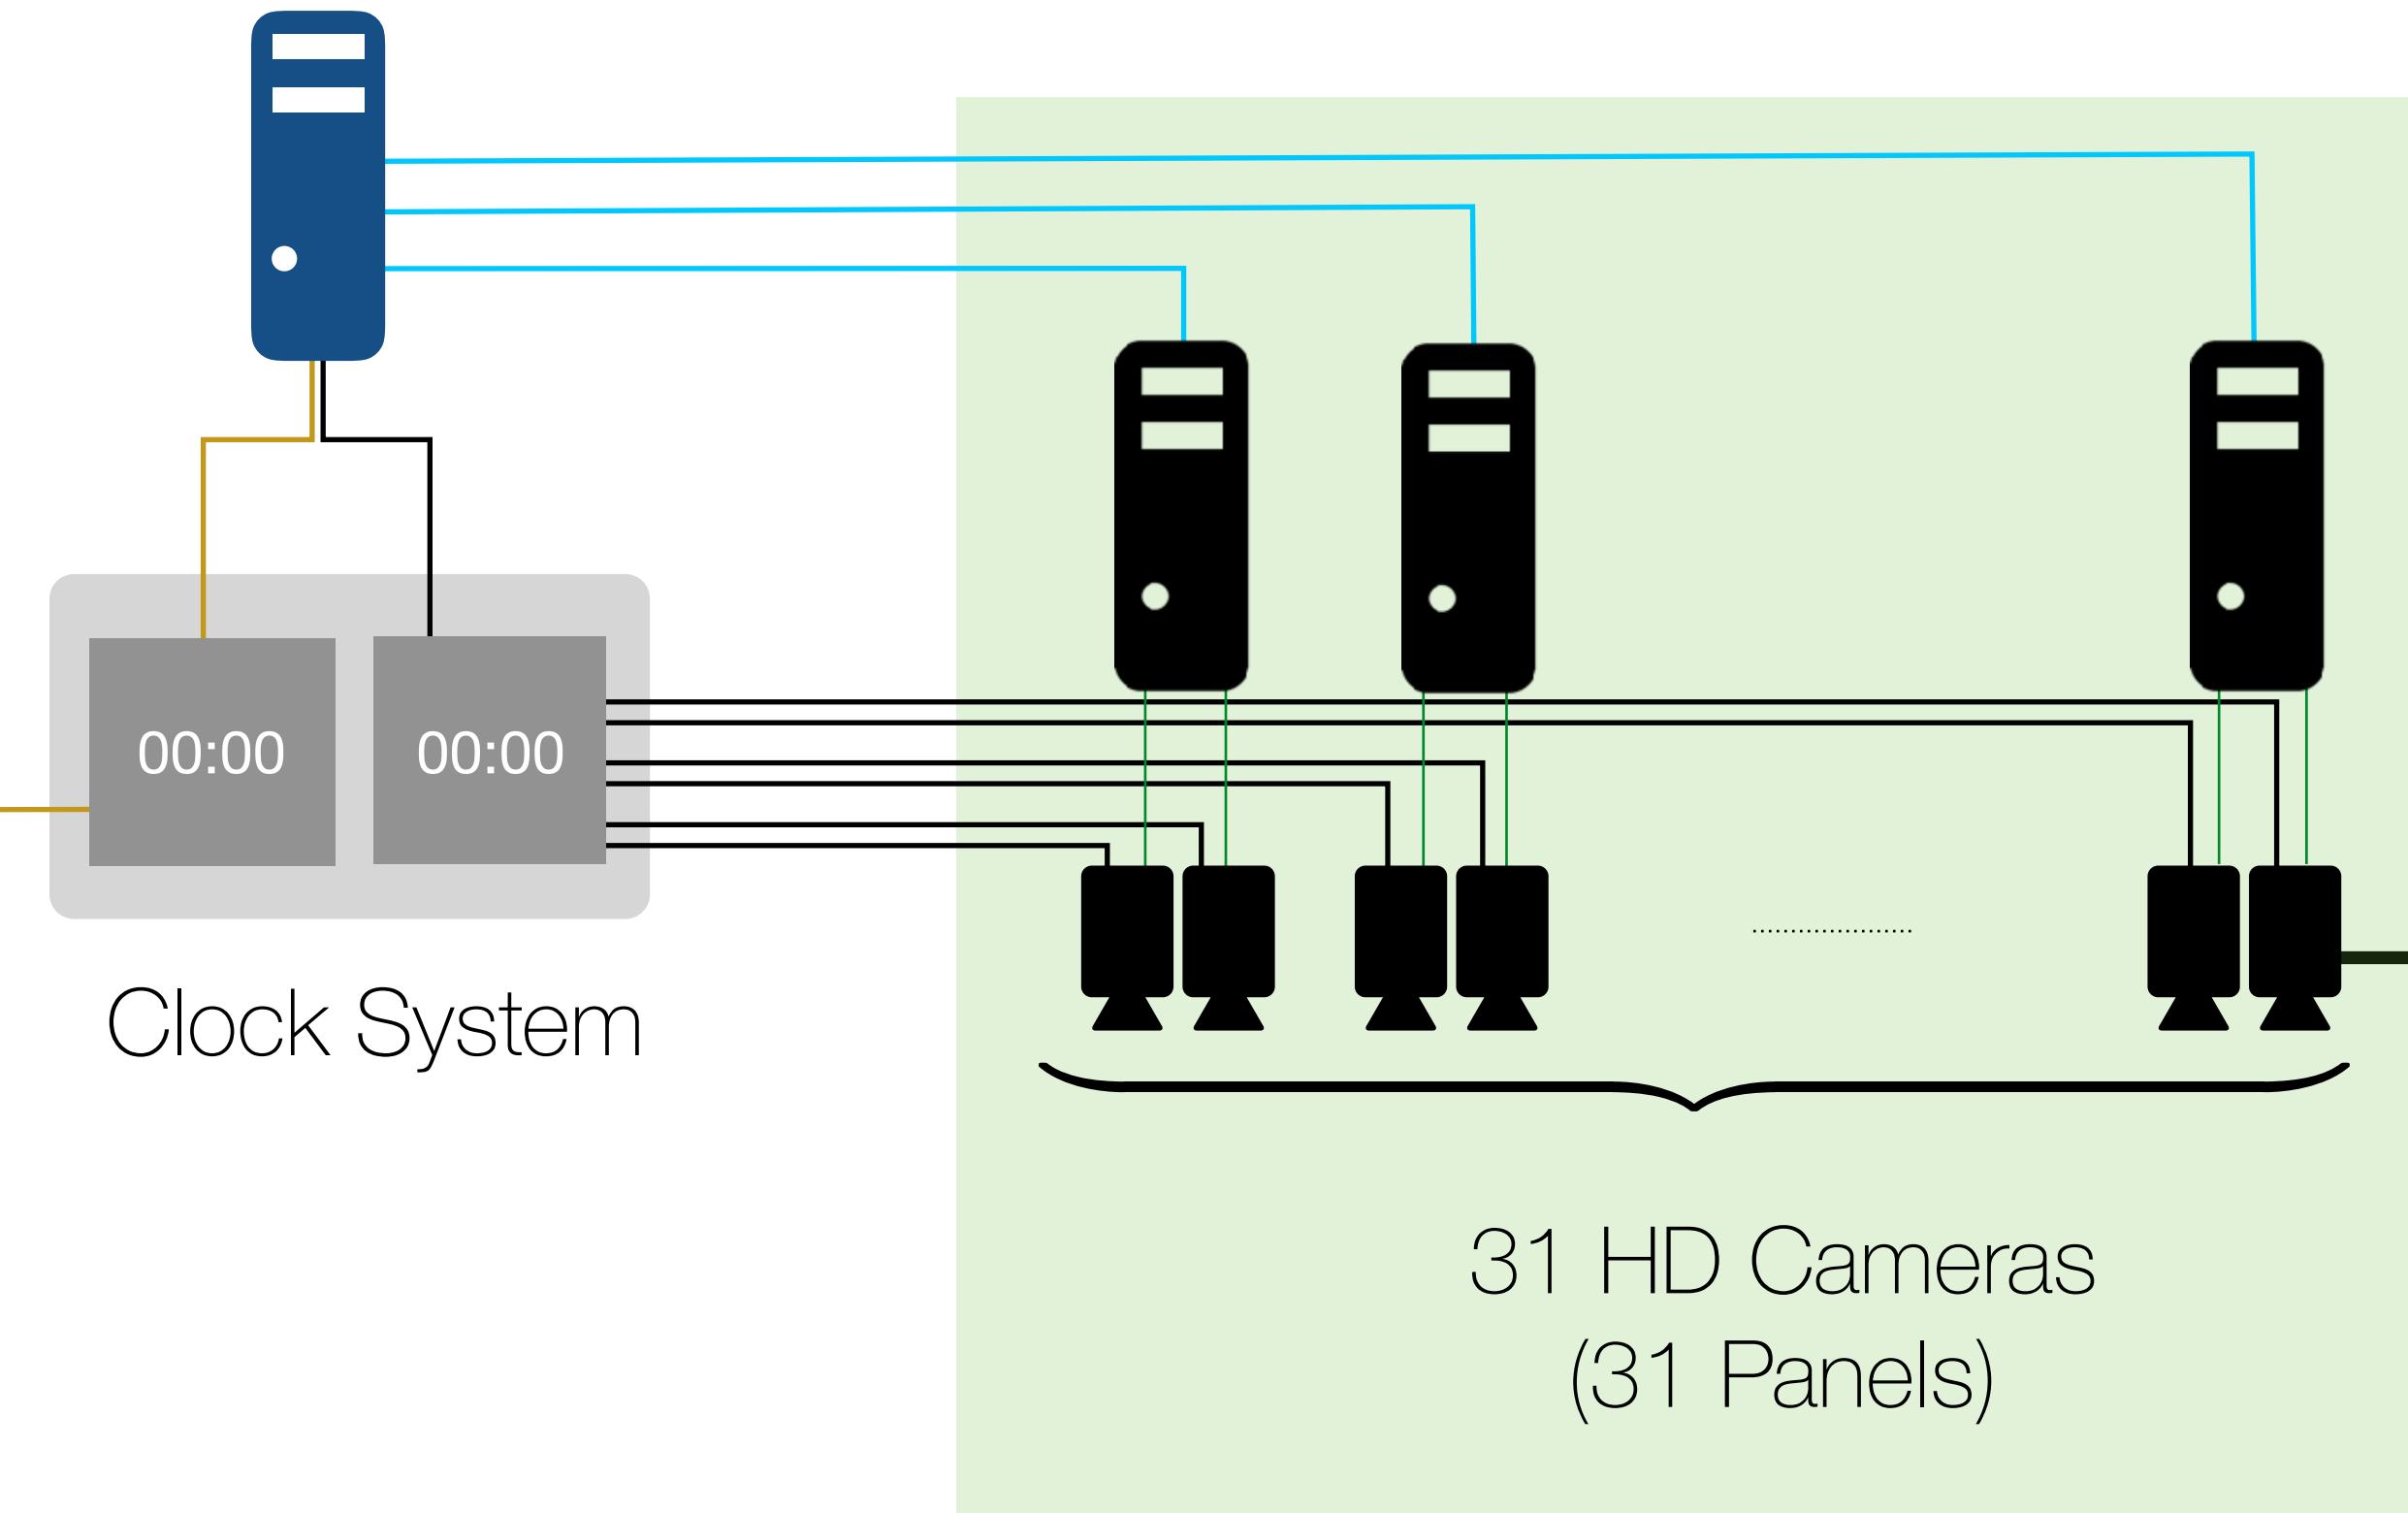

- Keypoint localization
 - Coverage of working volume
 - Practicality
-
- VisualSfM + custom codes
 - COLMAP (<https://colmap.github.io/>)

Miscellaneous

Audio Capture

Timestamped by HD Cameras

Master Node

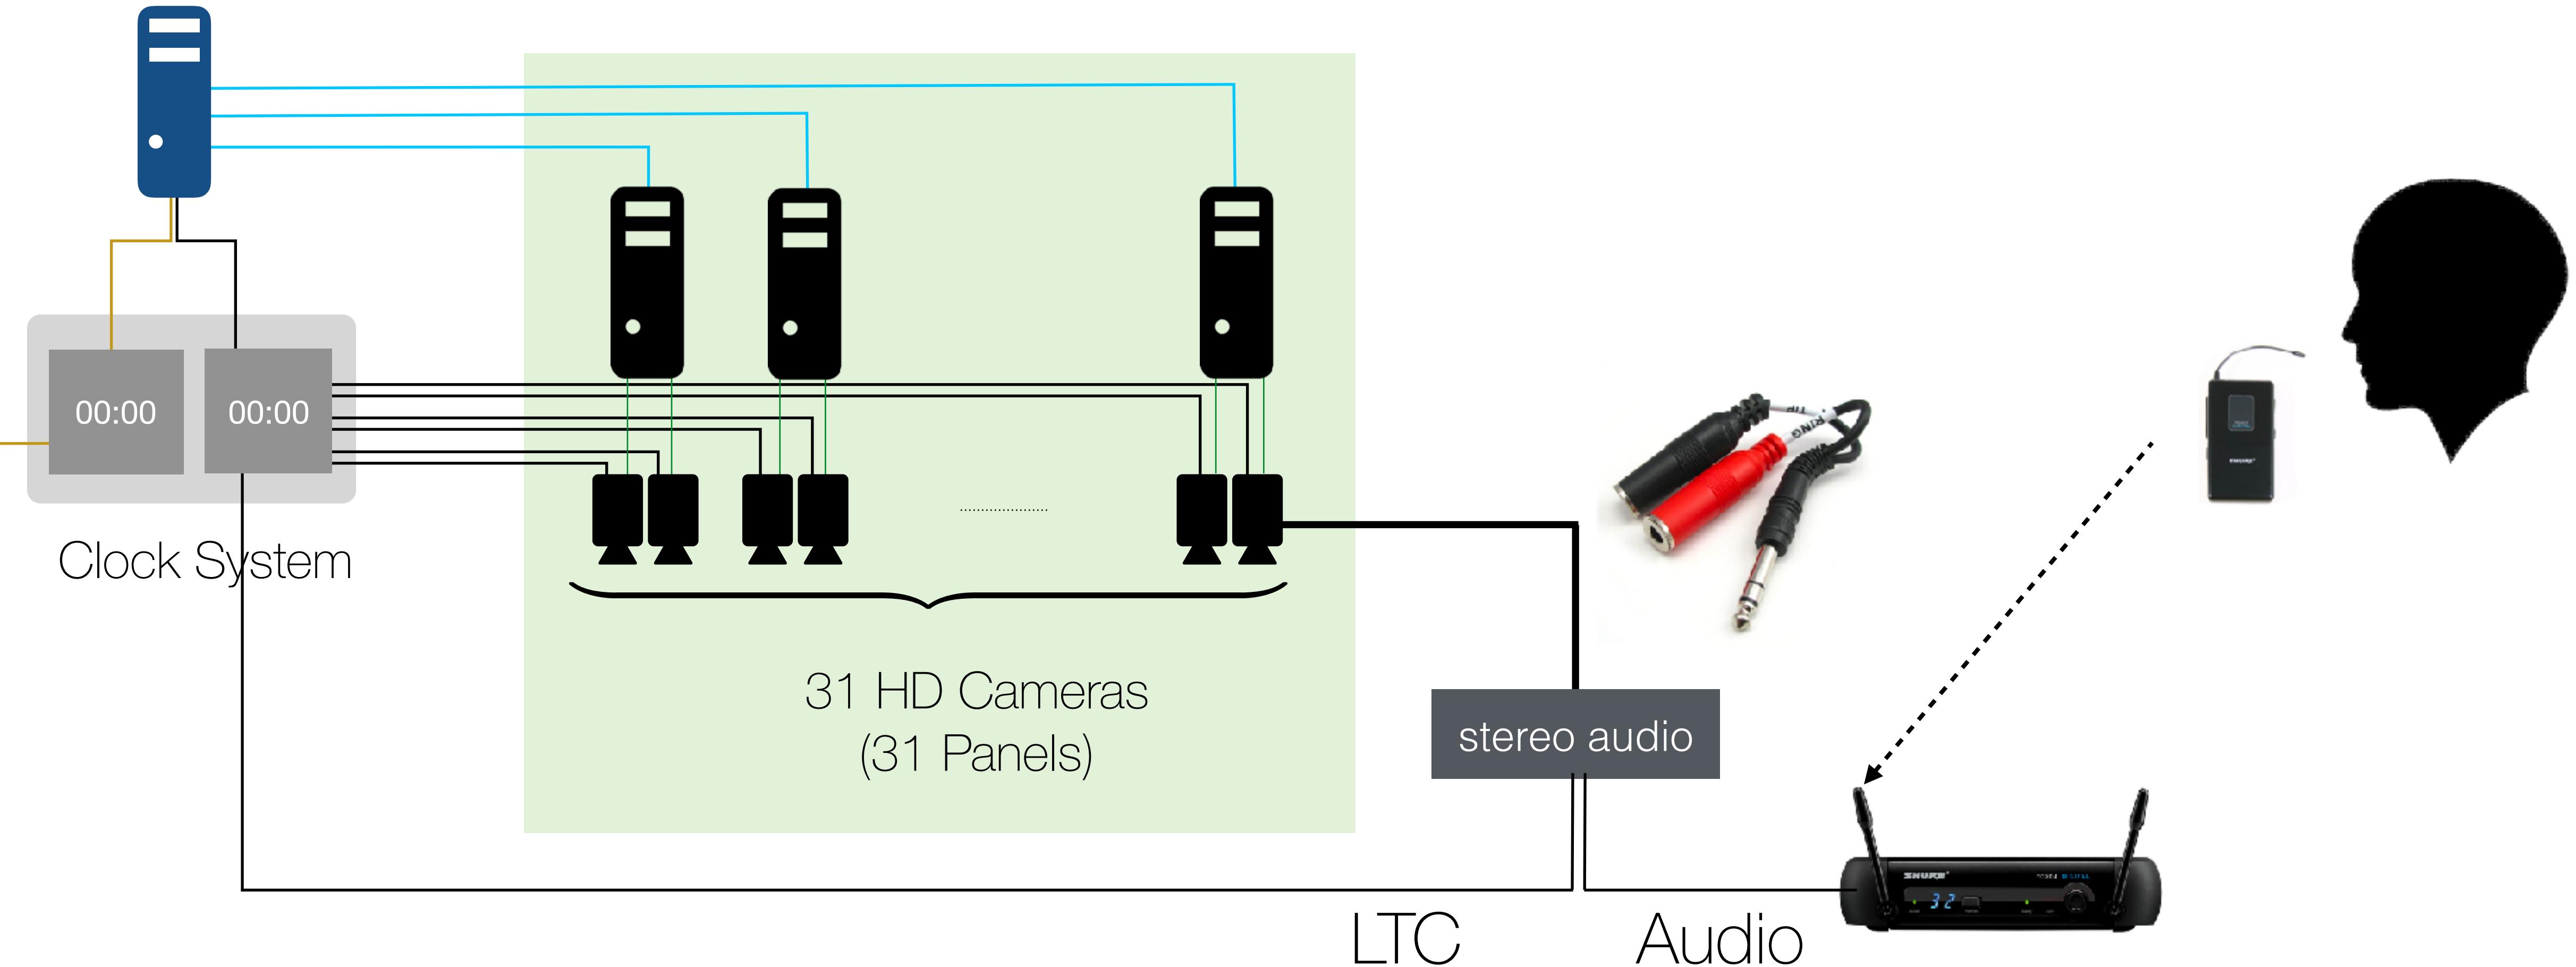

Currently 15 wireless + 3 fixed microphones

Audio Capture

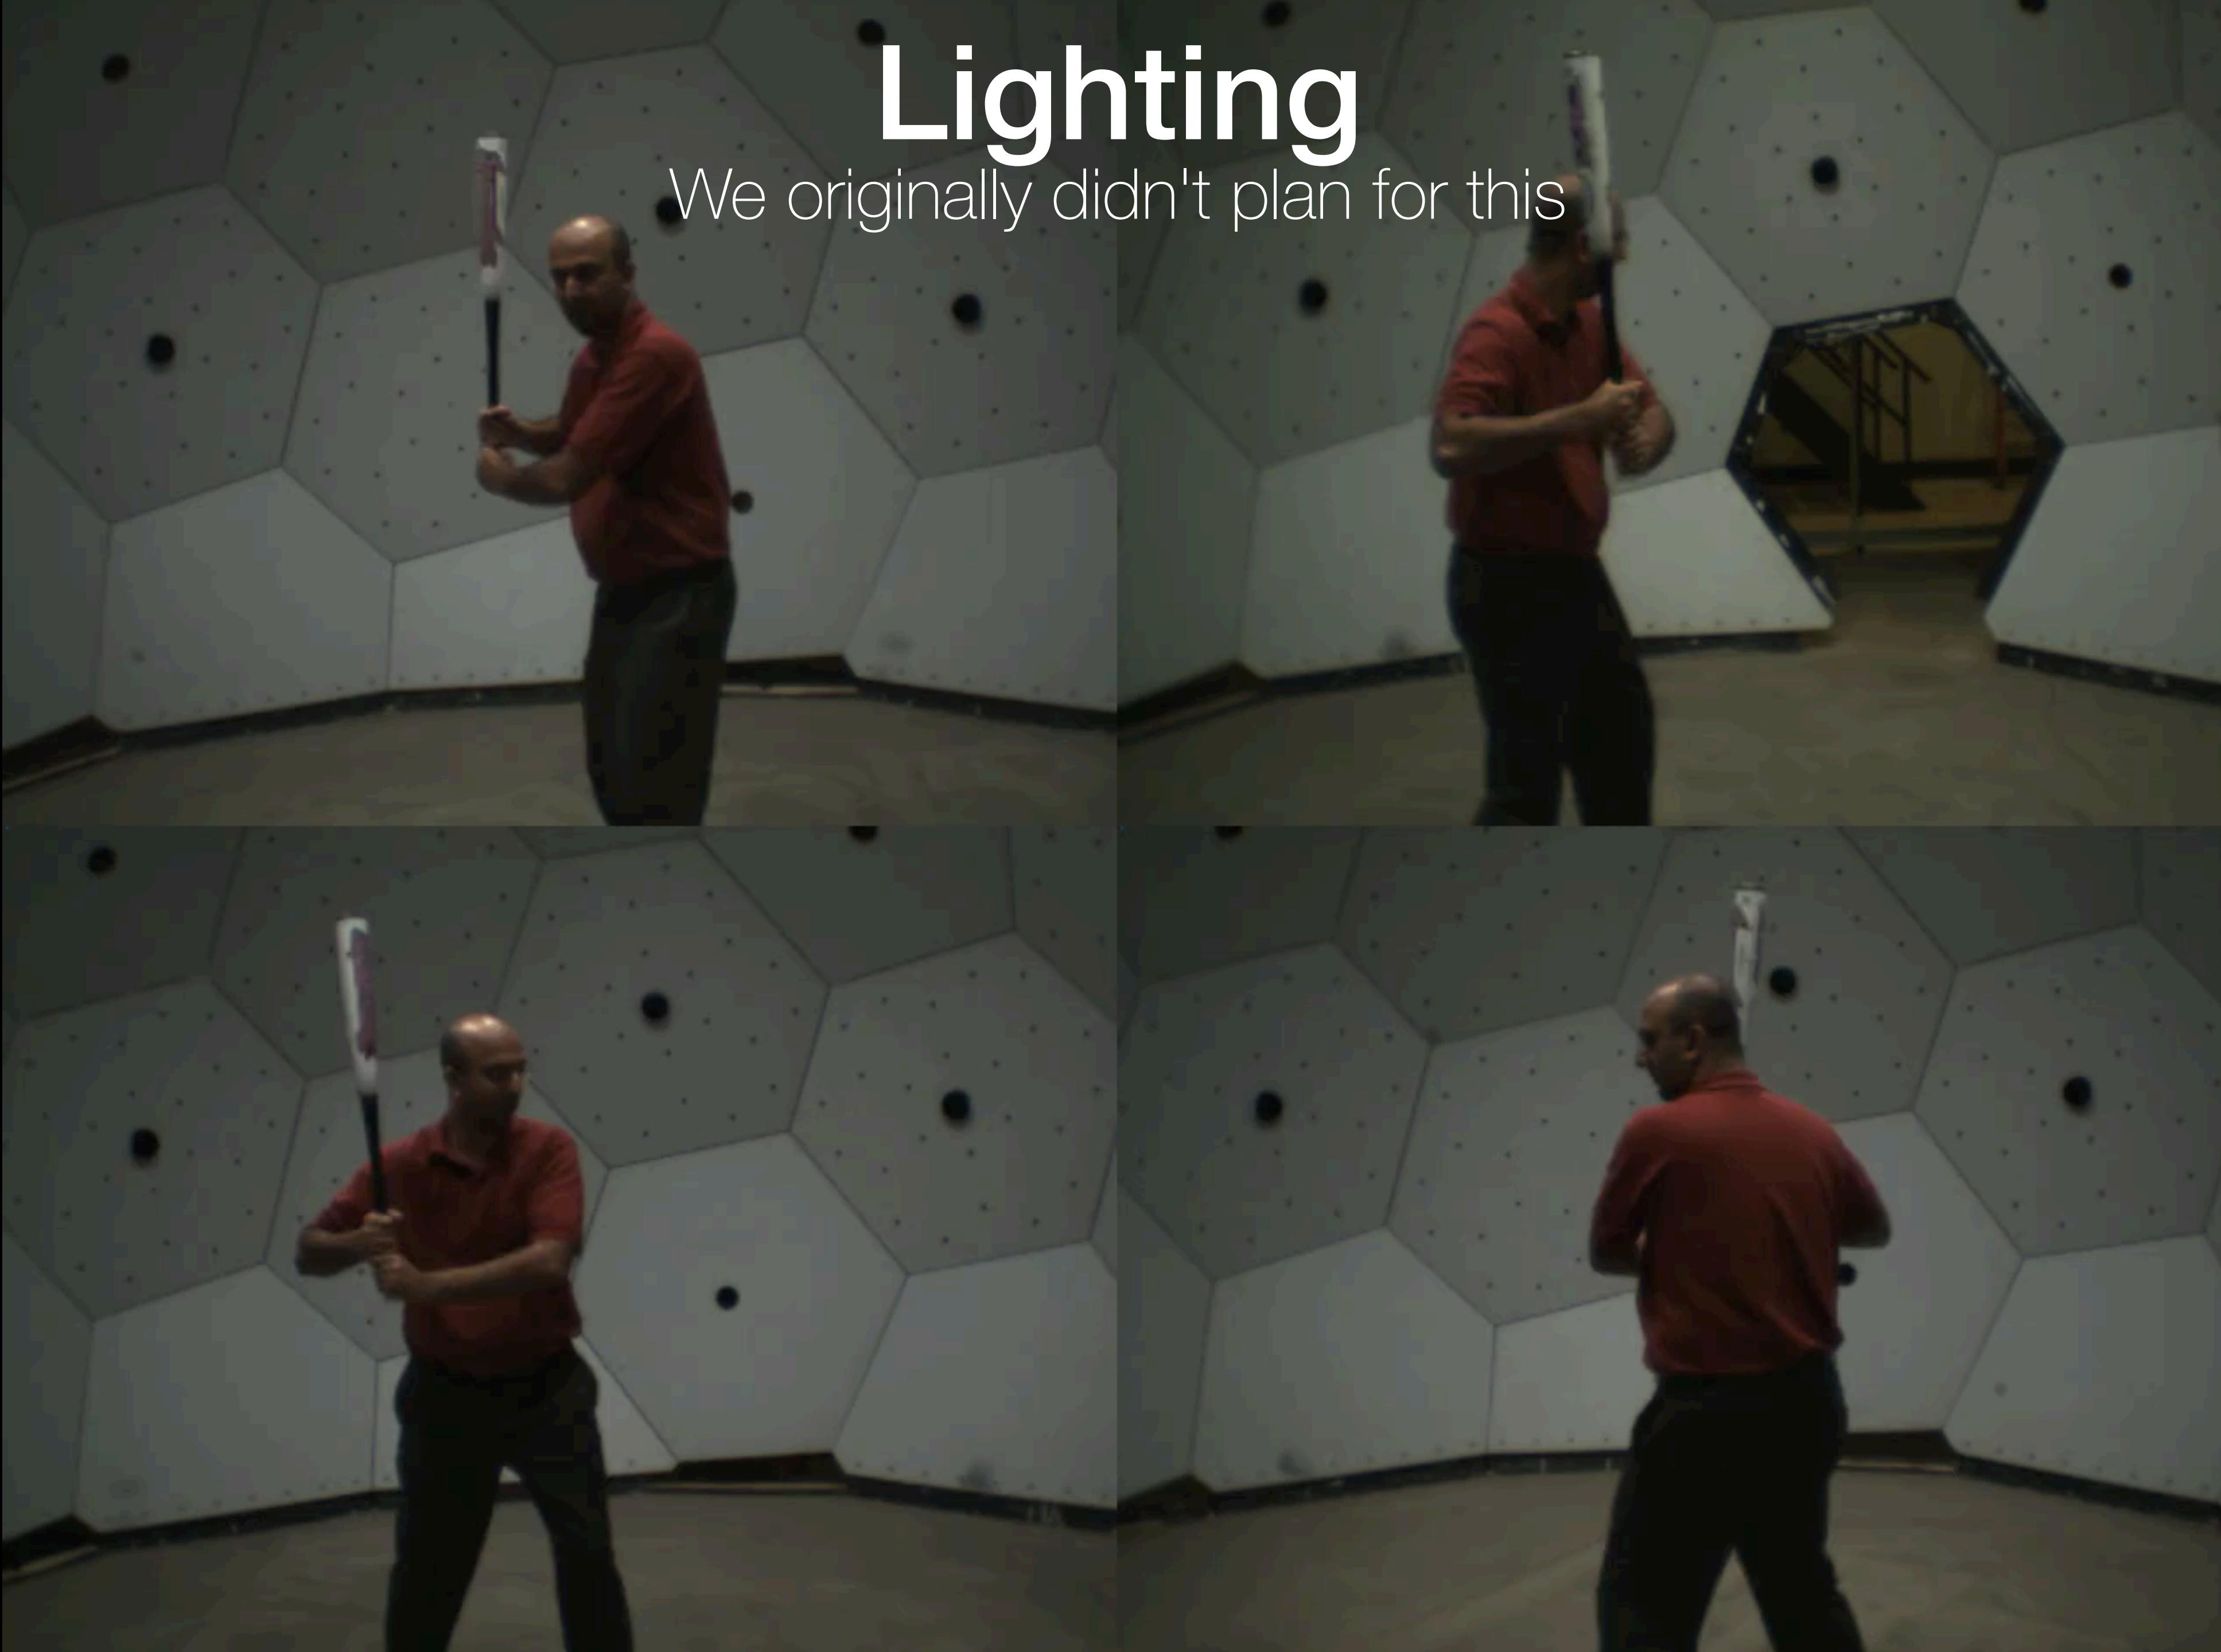

Timestamped by HD Cameras

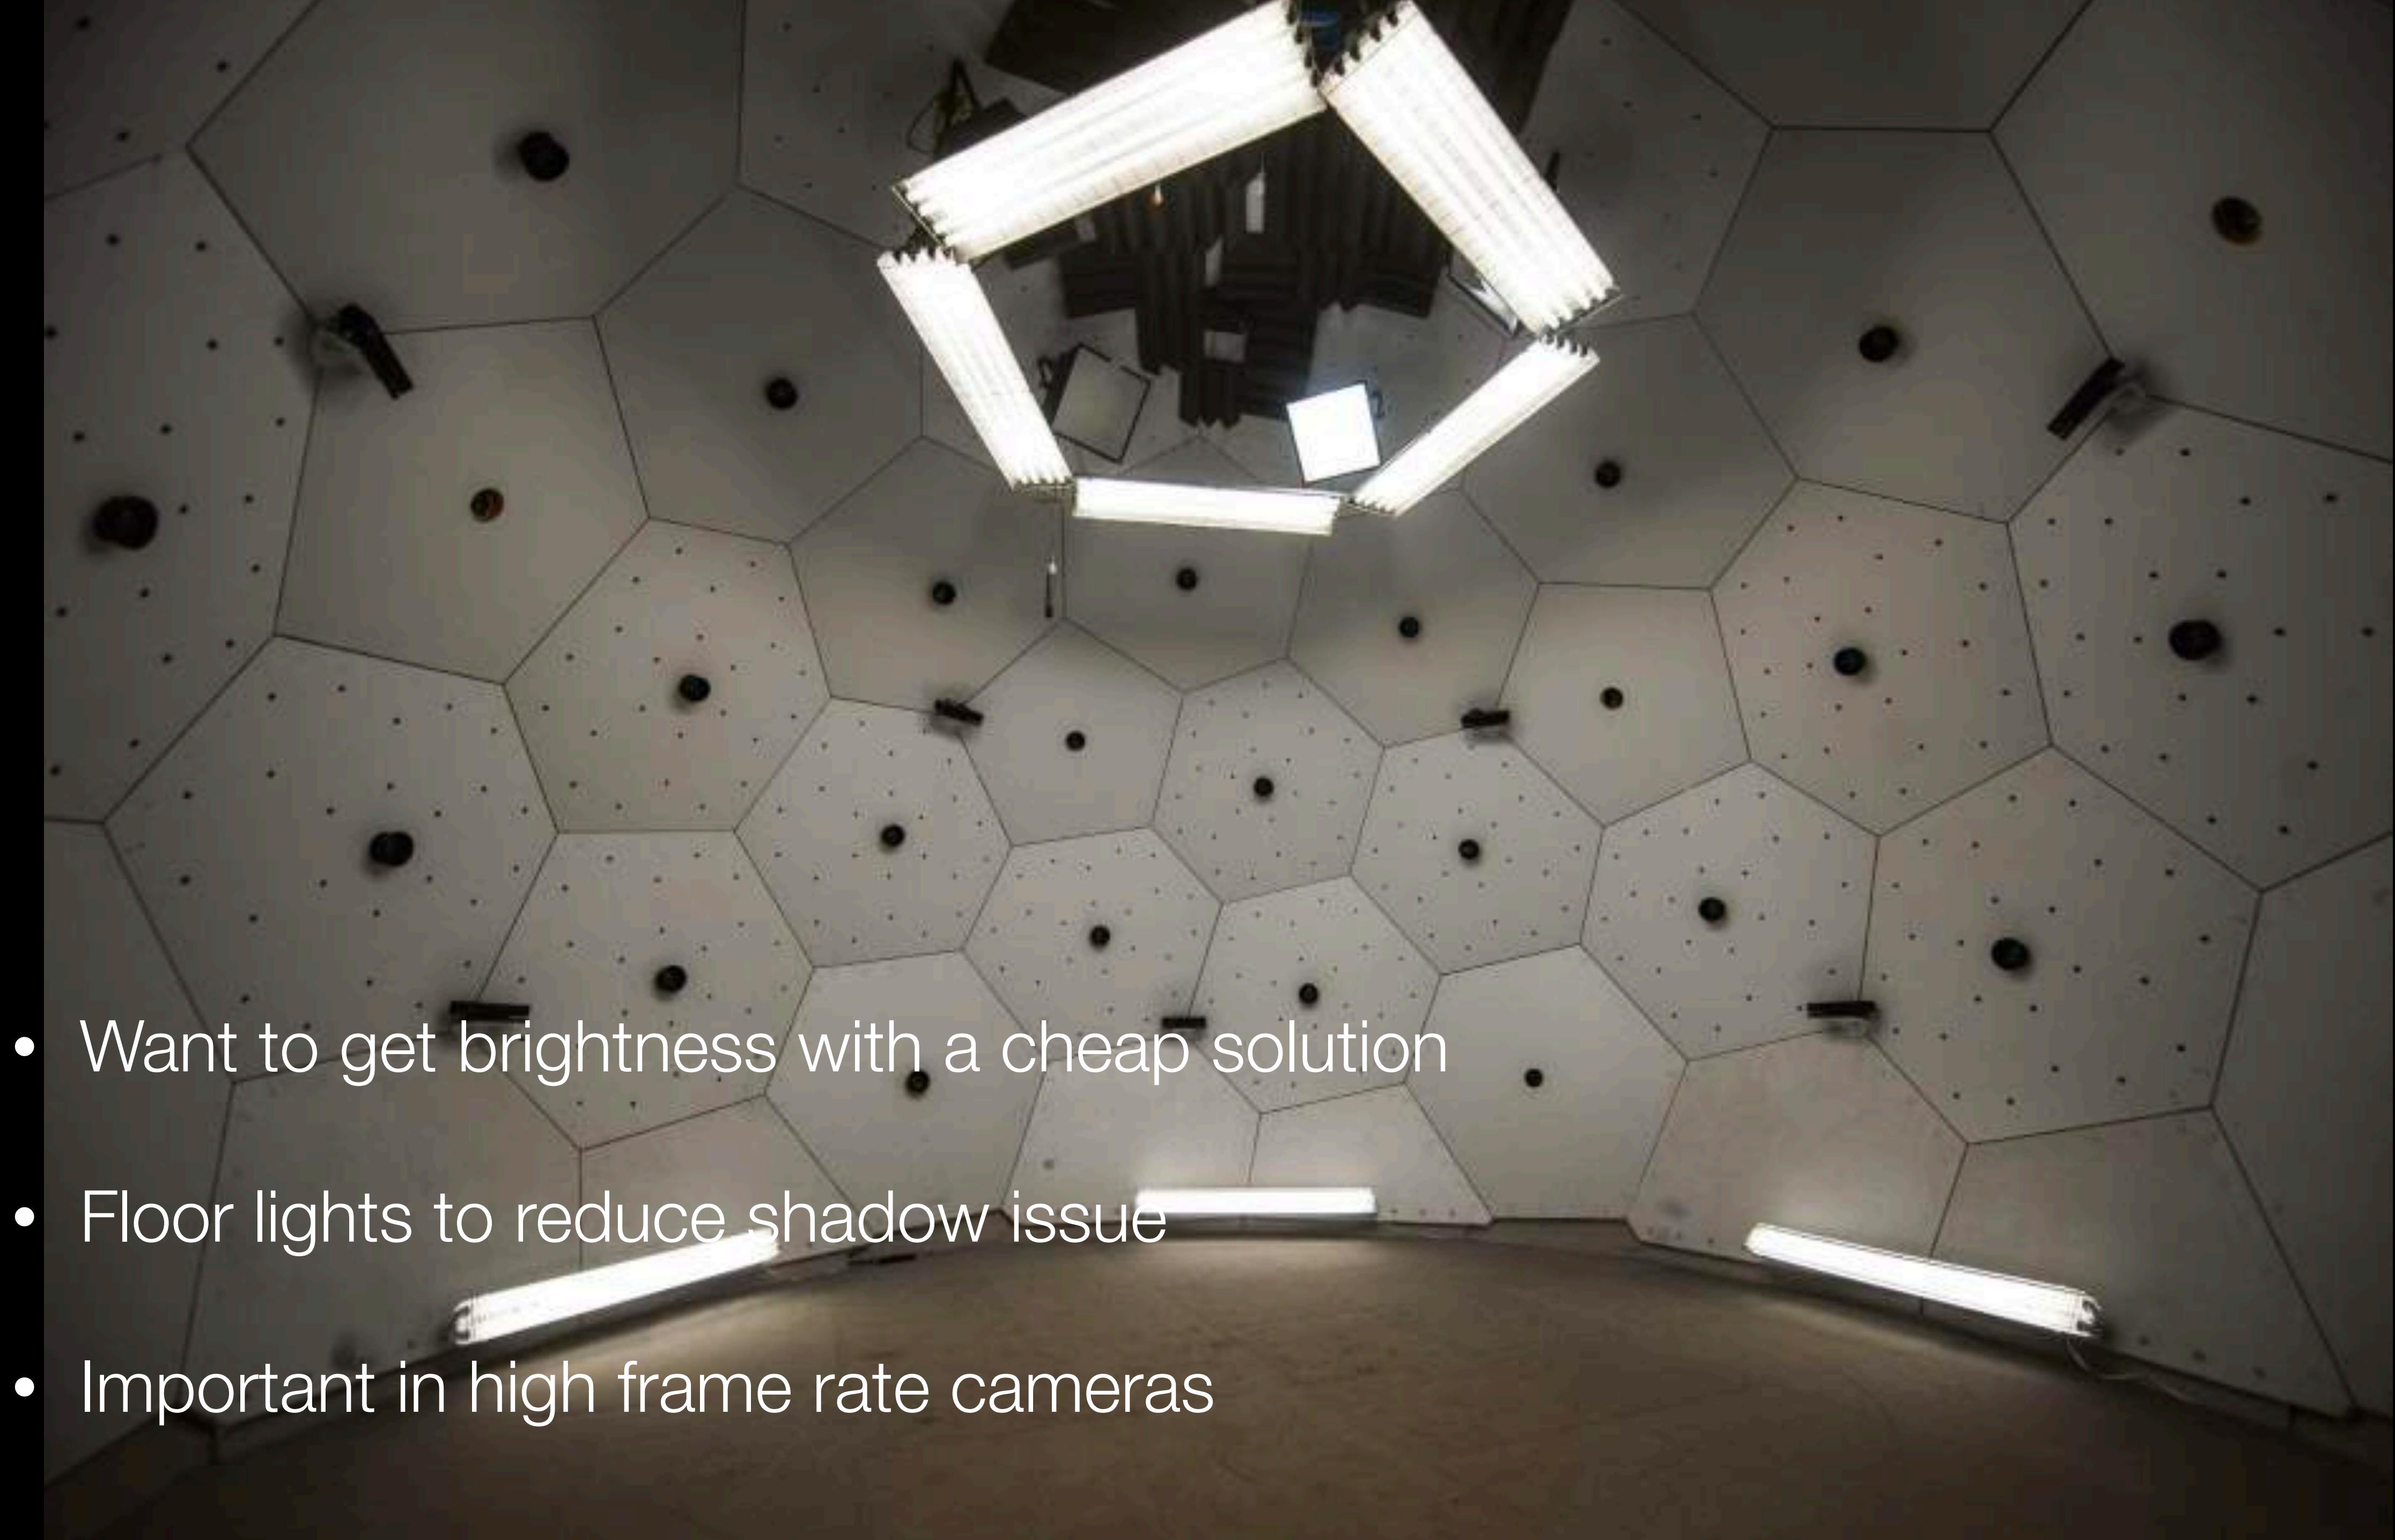

Master Node

Lighting

We originally didn't plan for this

- Want to get brightness with a cheap solution
- Floor lights to reduce shadow issue
- Important in high frame rate cameras

What Does Frame Start Mean?

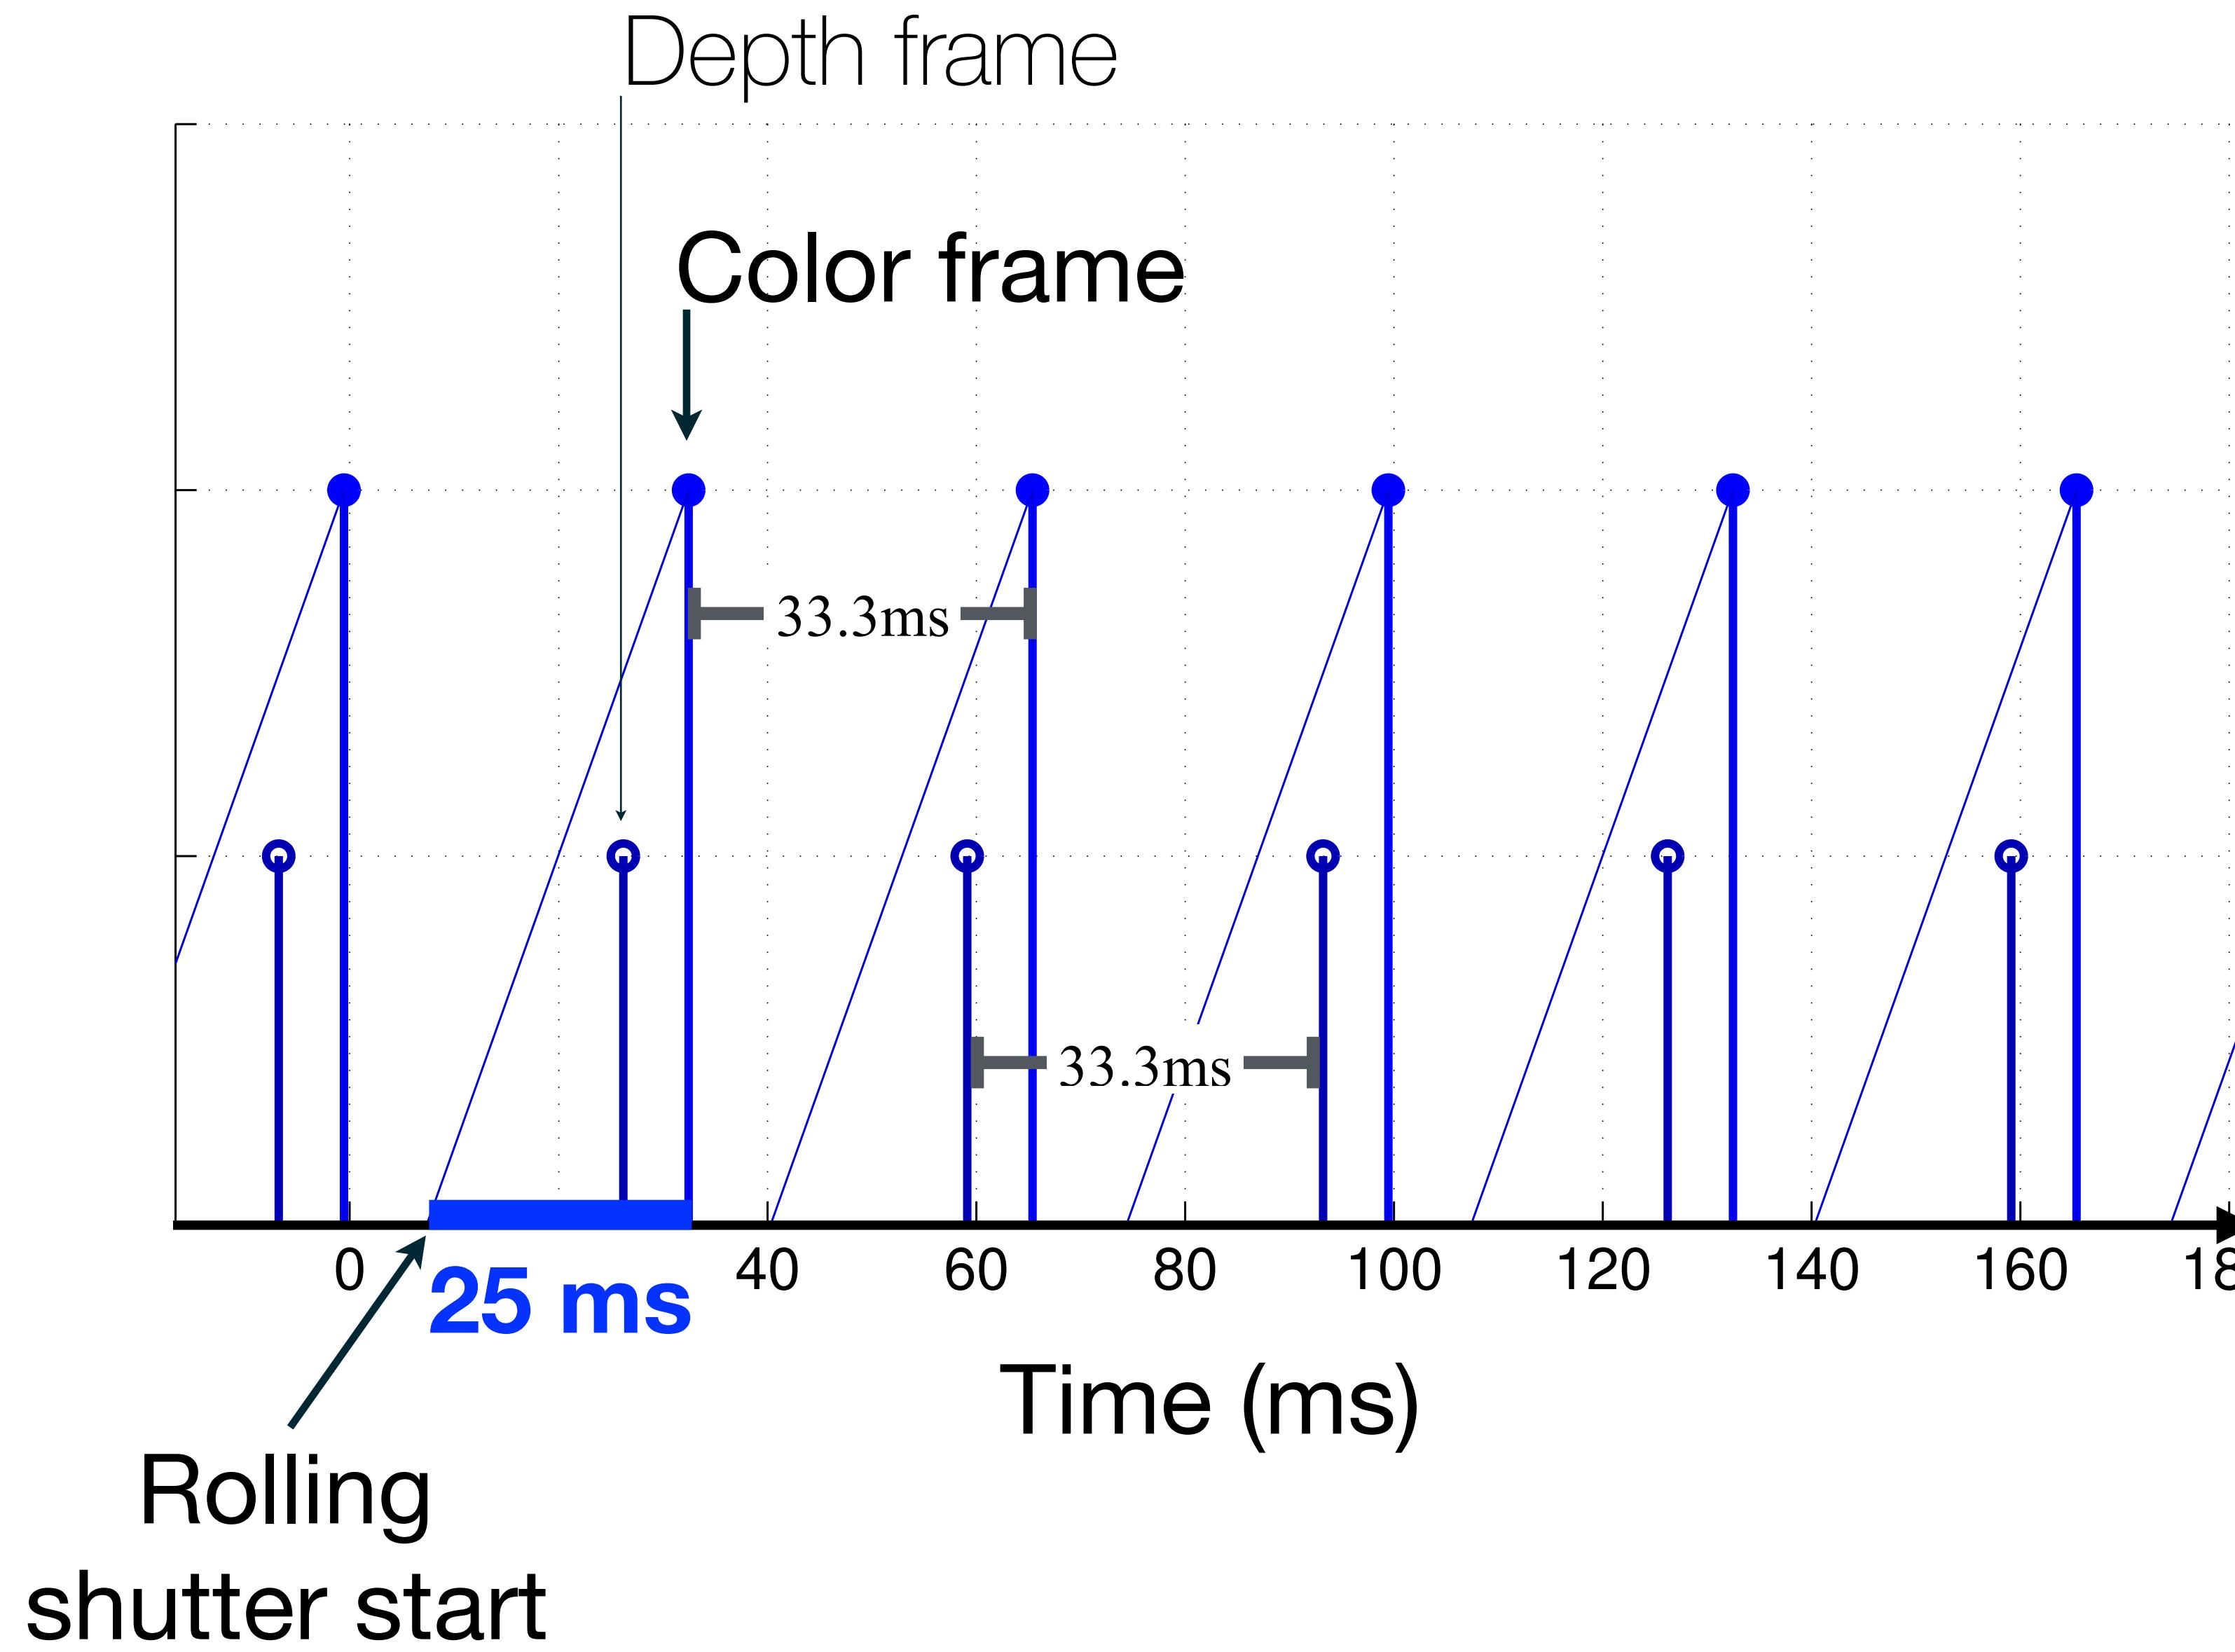

RGB+Depth Relative Timing

What Does Frame Start Mean?

Rolling Shutter Effects

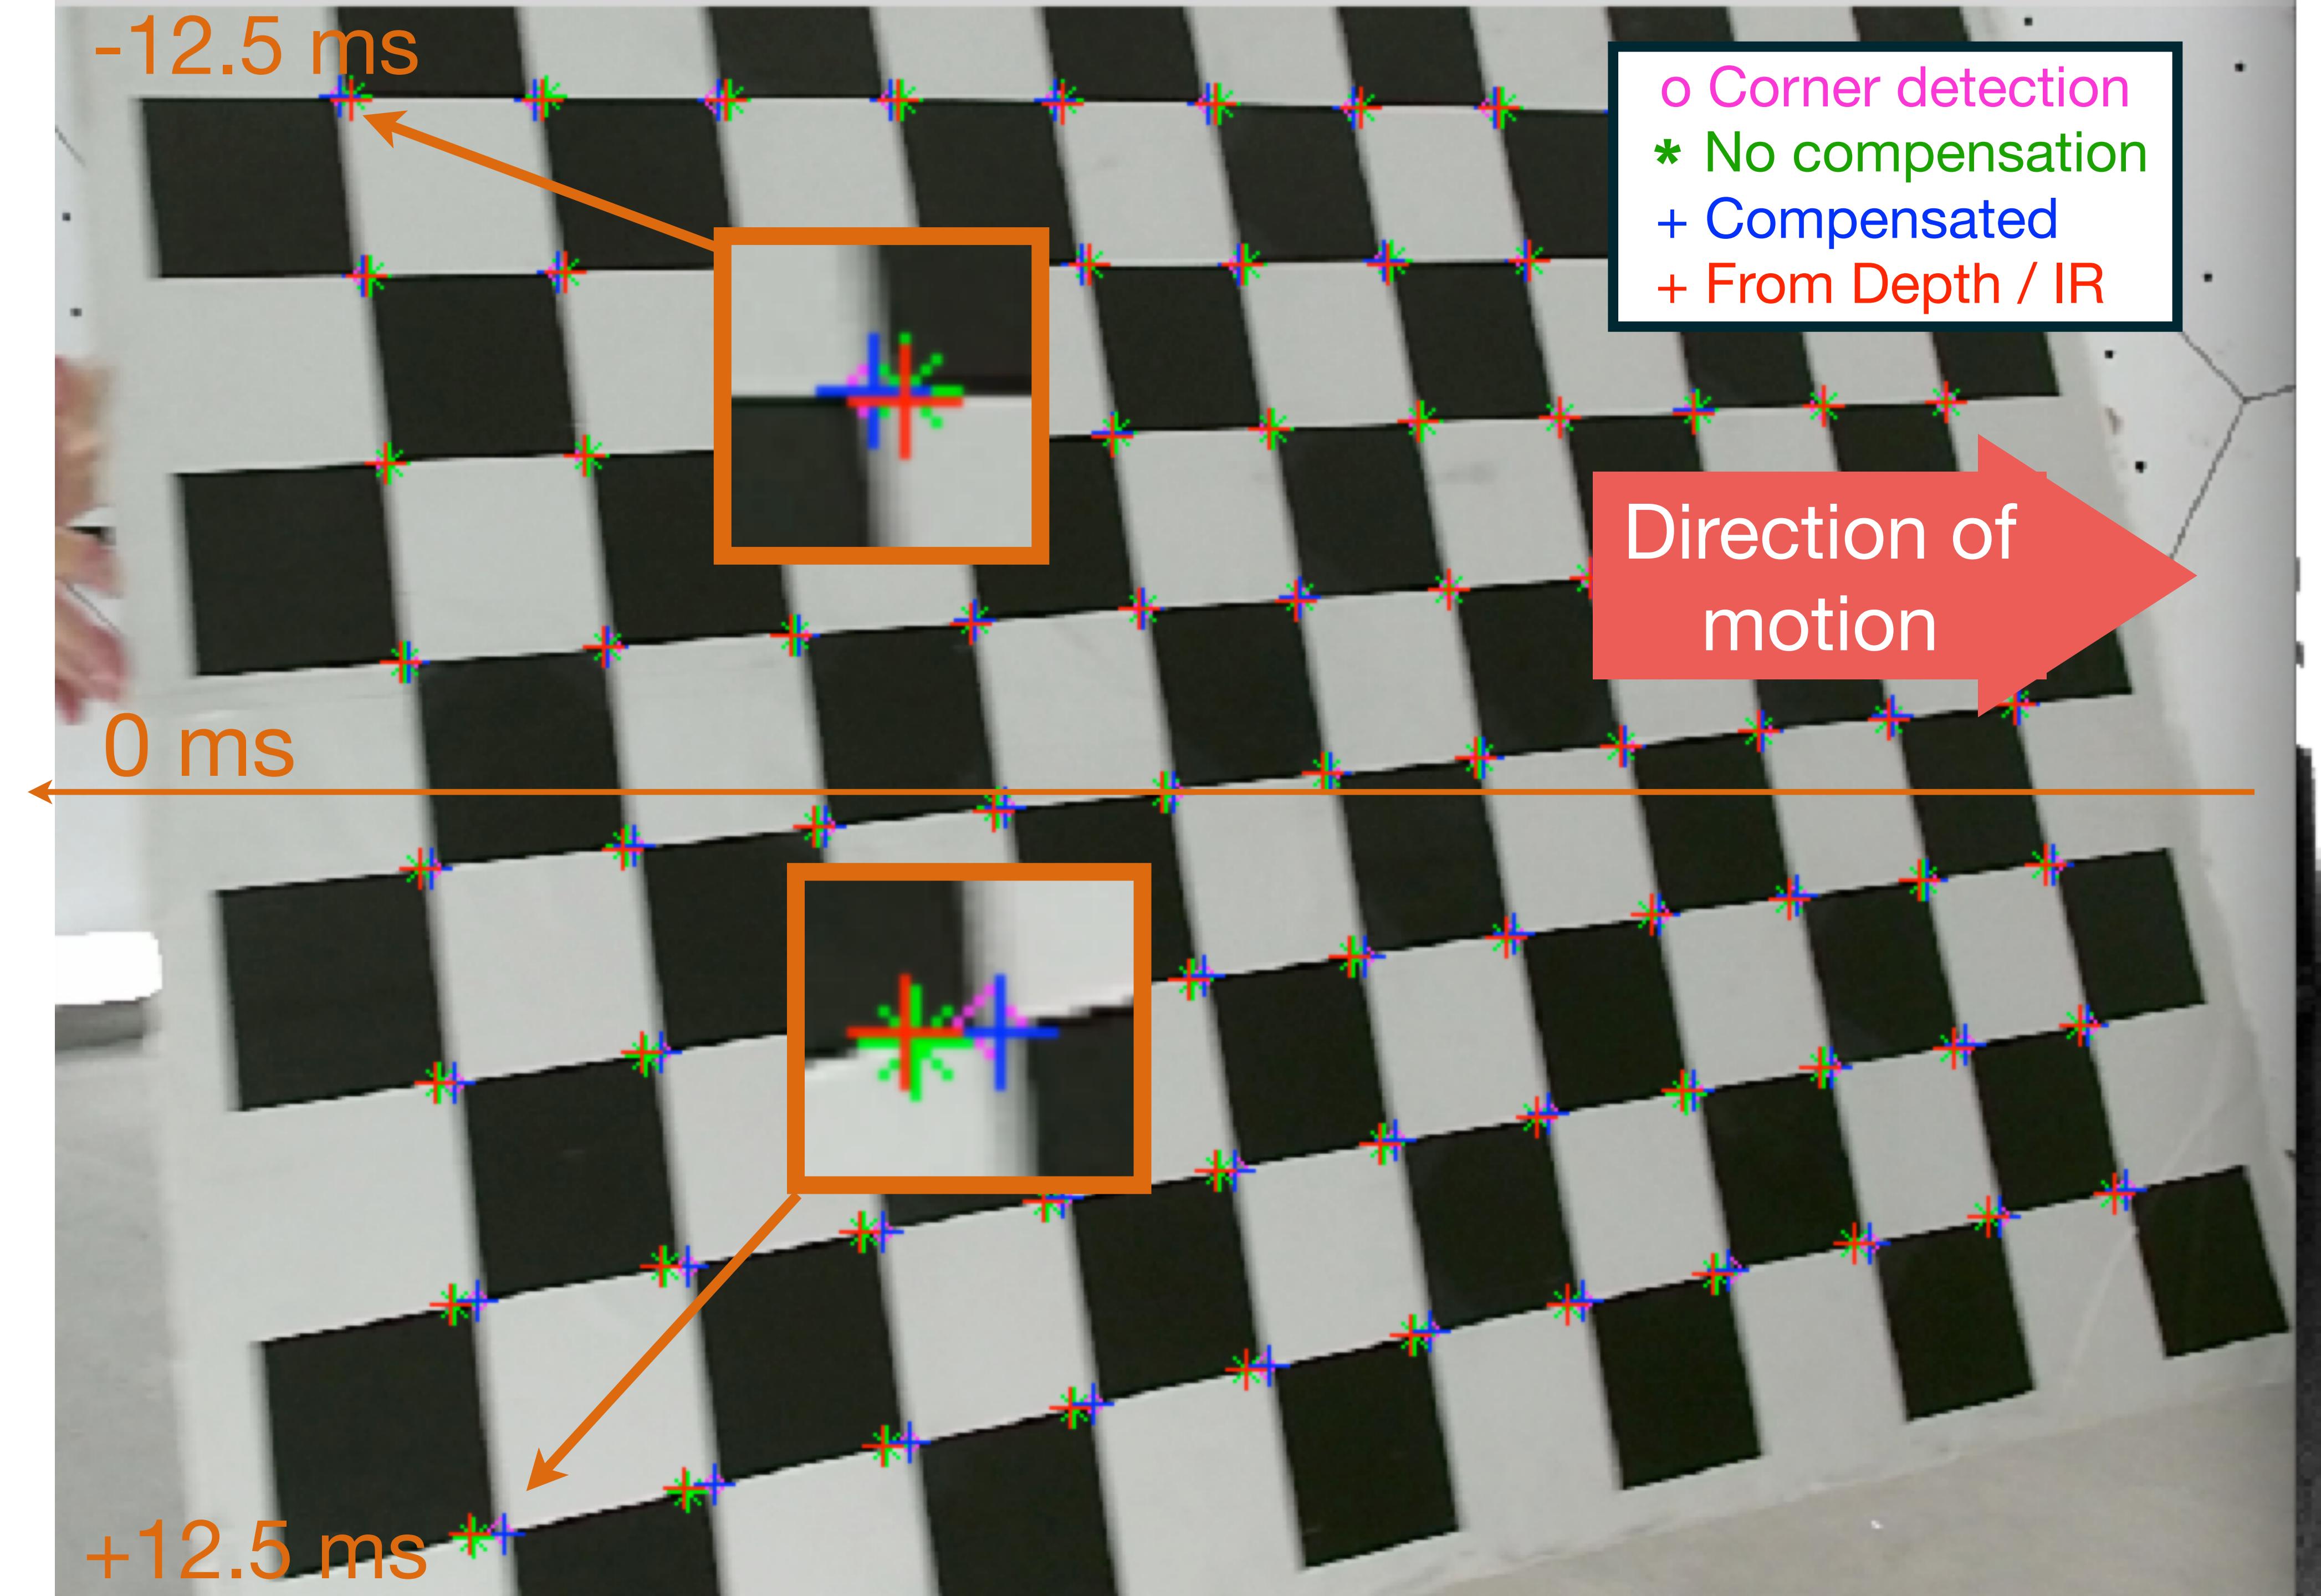

Color

IR

Fast Motion Artifacts

Kinect Synchronization

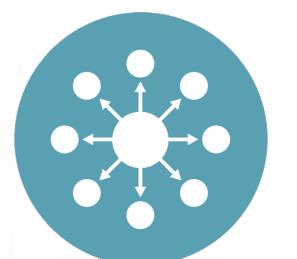

Take Home Messages

Precision

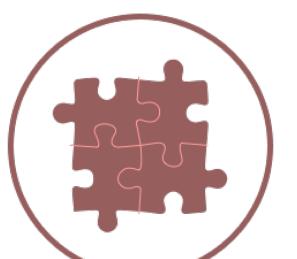

- Off-the-shelf RGBD sensors are cheap, but you'll have to deal with synchronization & interference

Scalability

- Modifying hardware is very impractical: PTP as an alternative

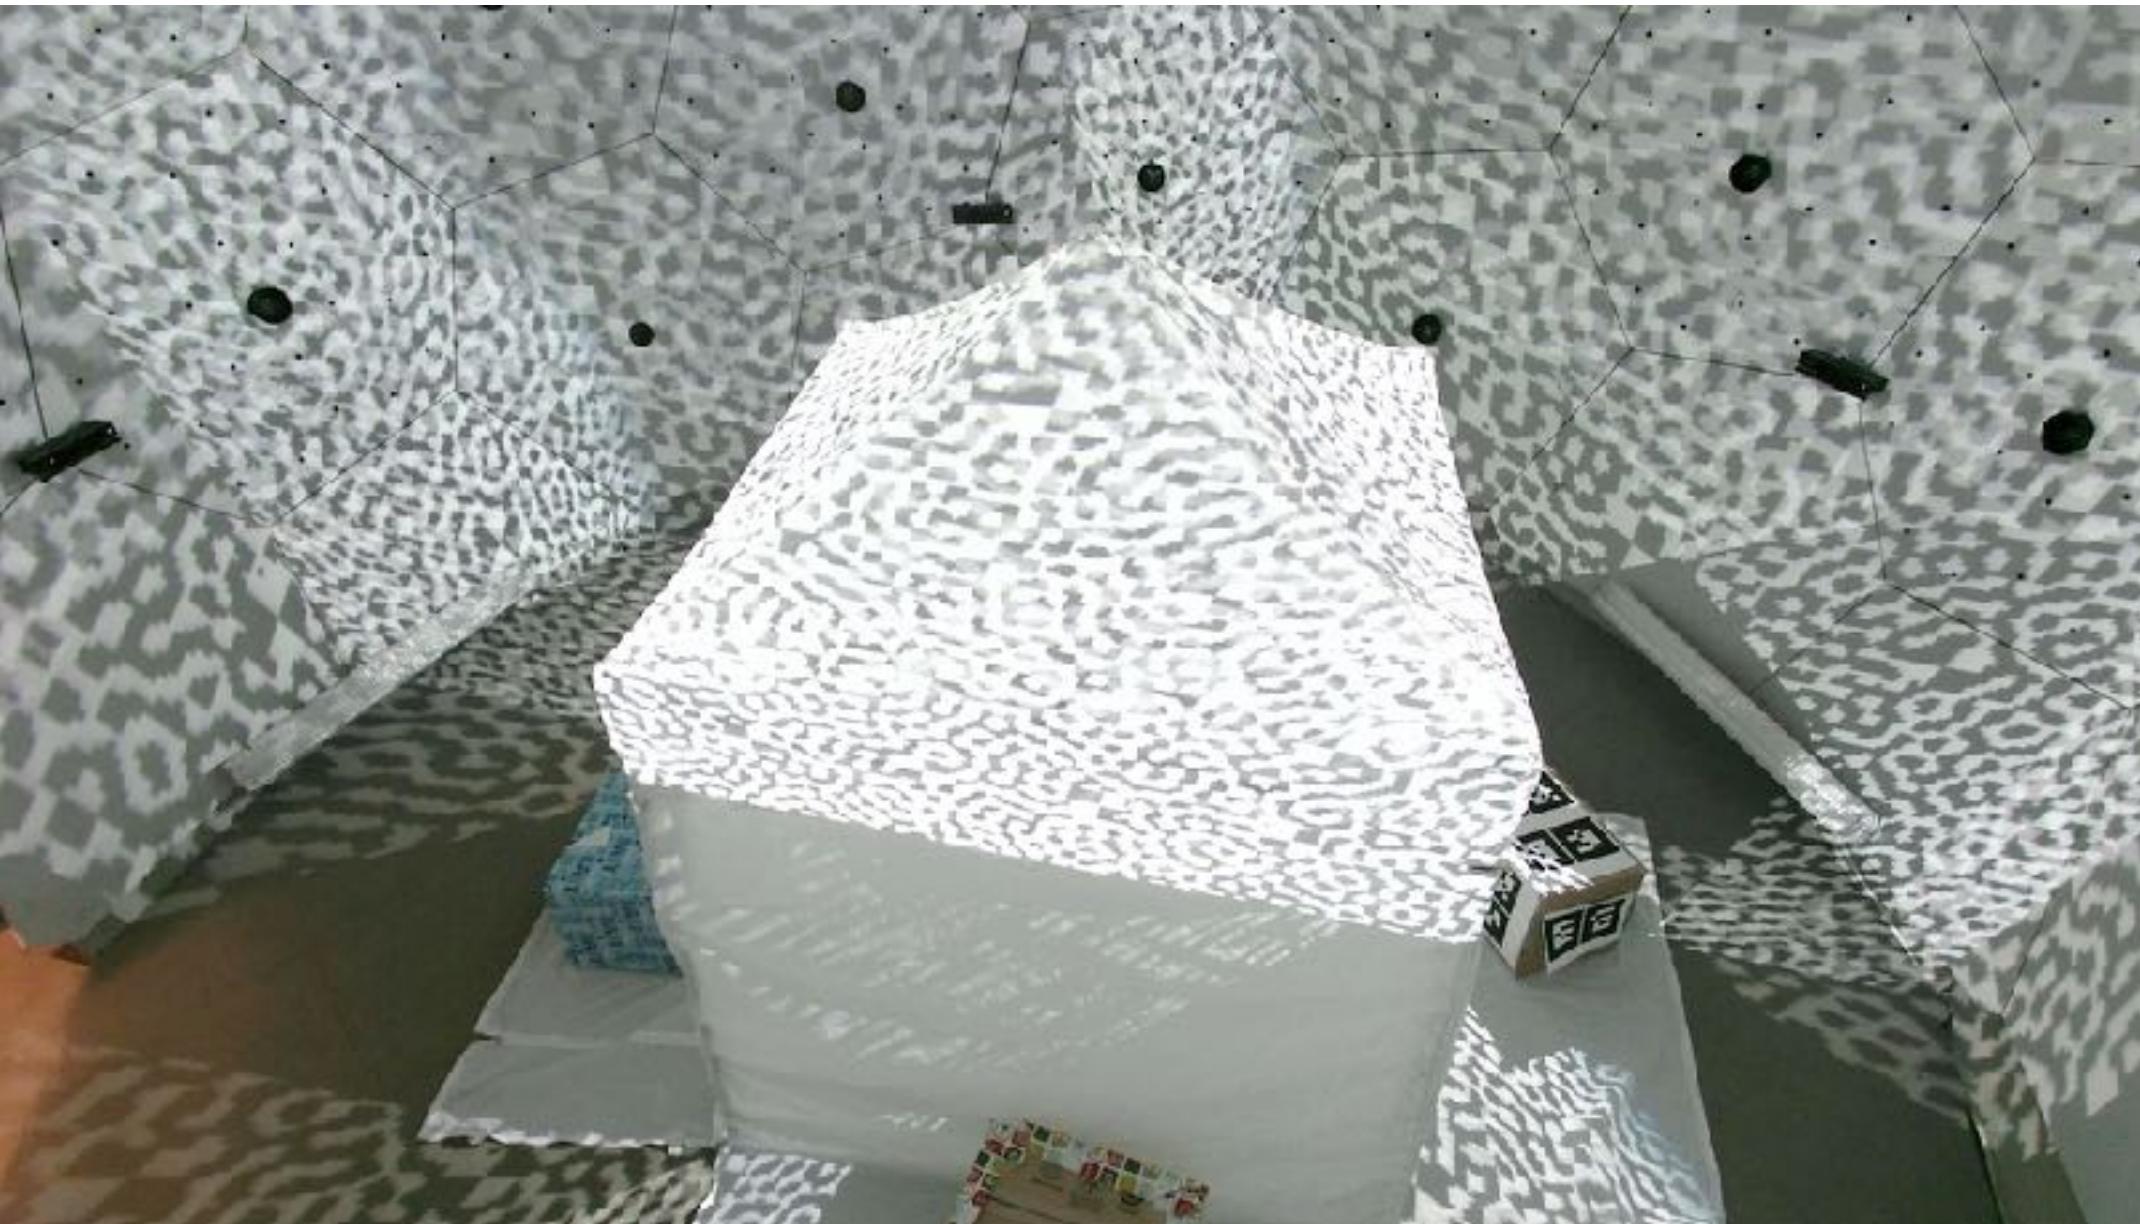

Versatility

- Quick way to get 3D reconstruction

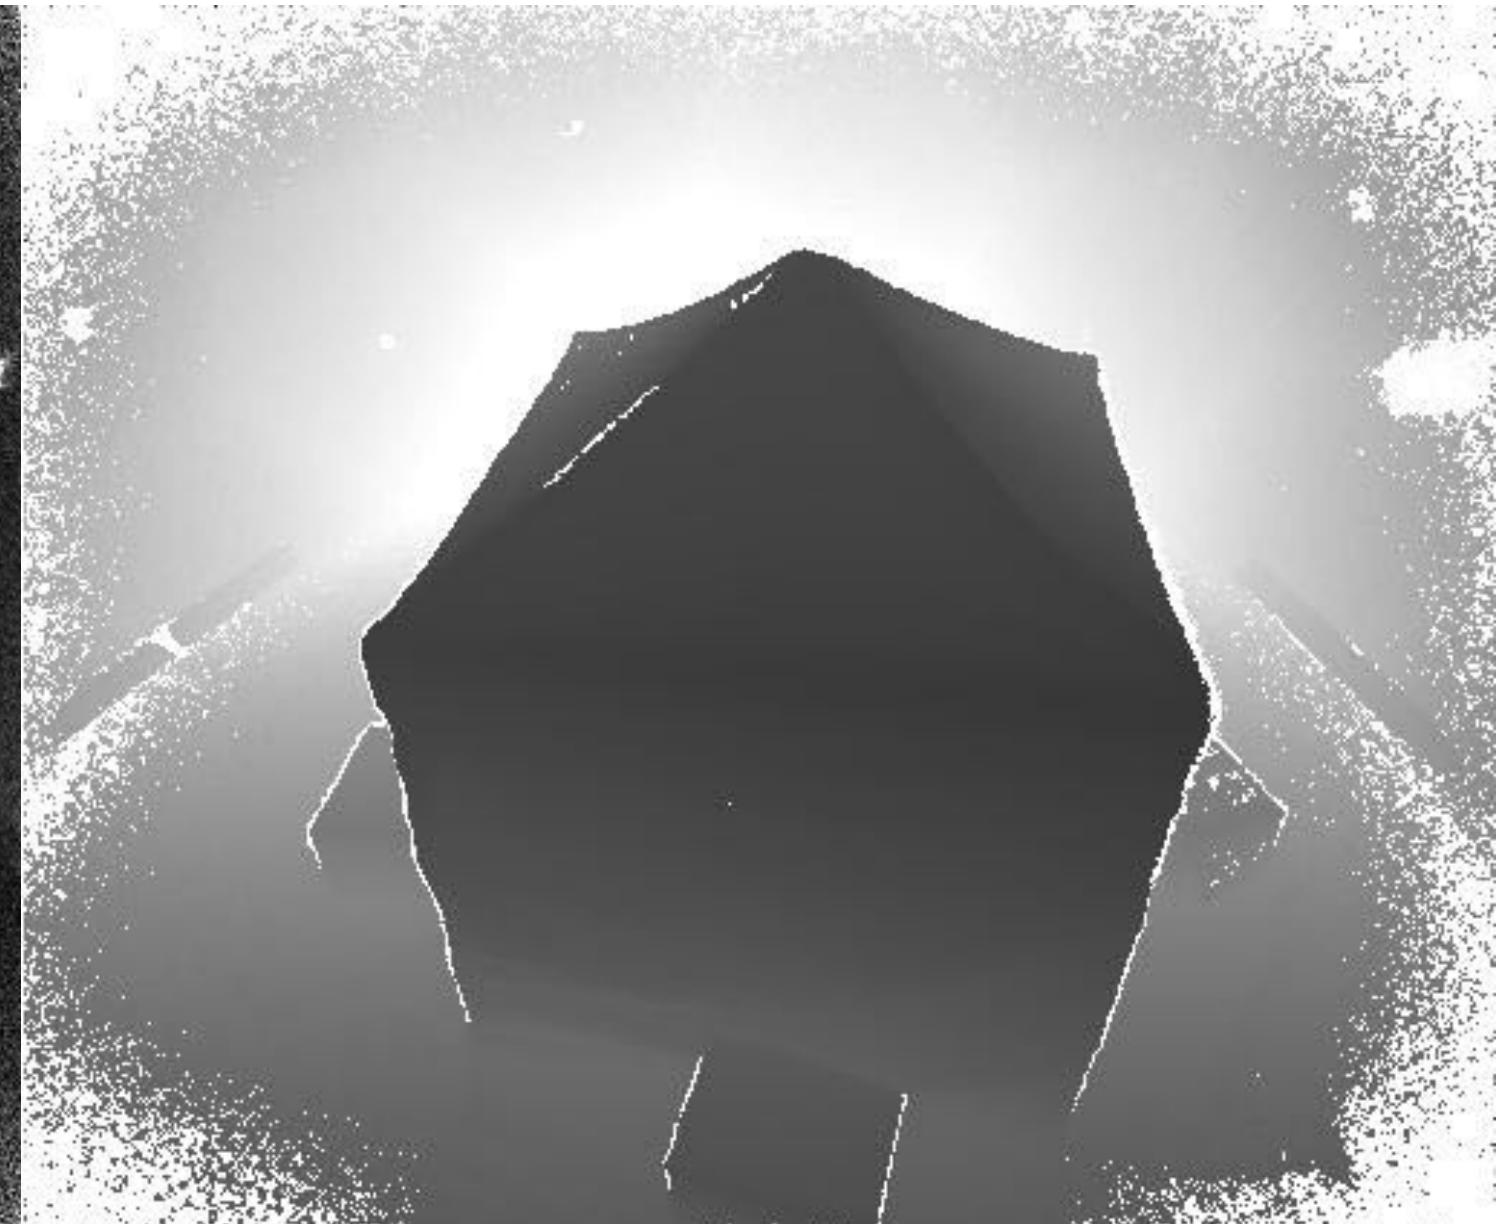

Kinect Calibration

Color

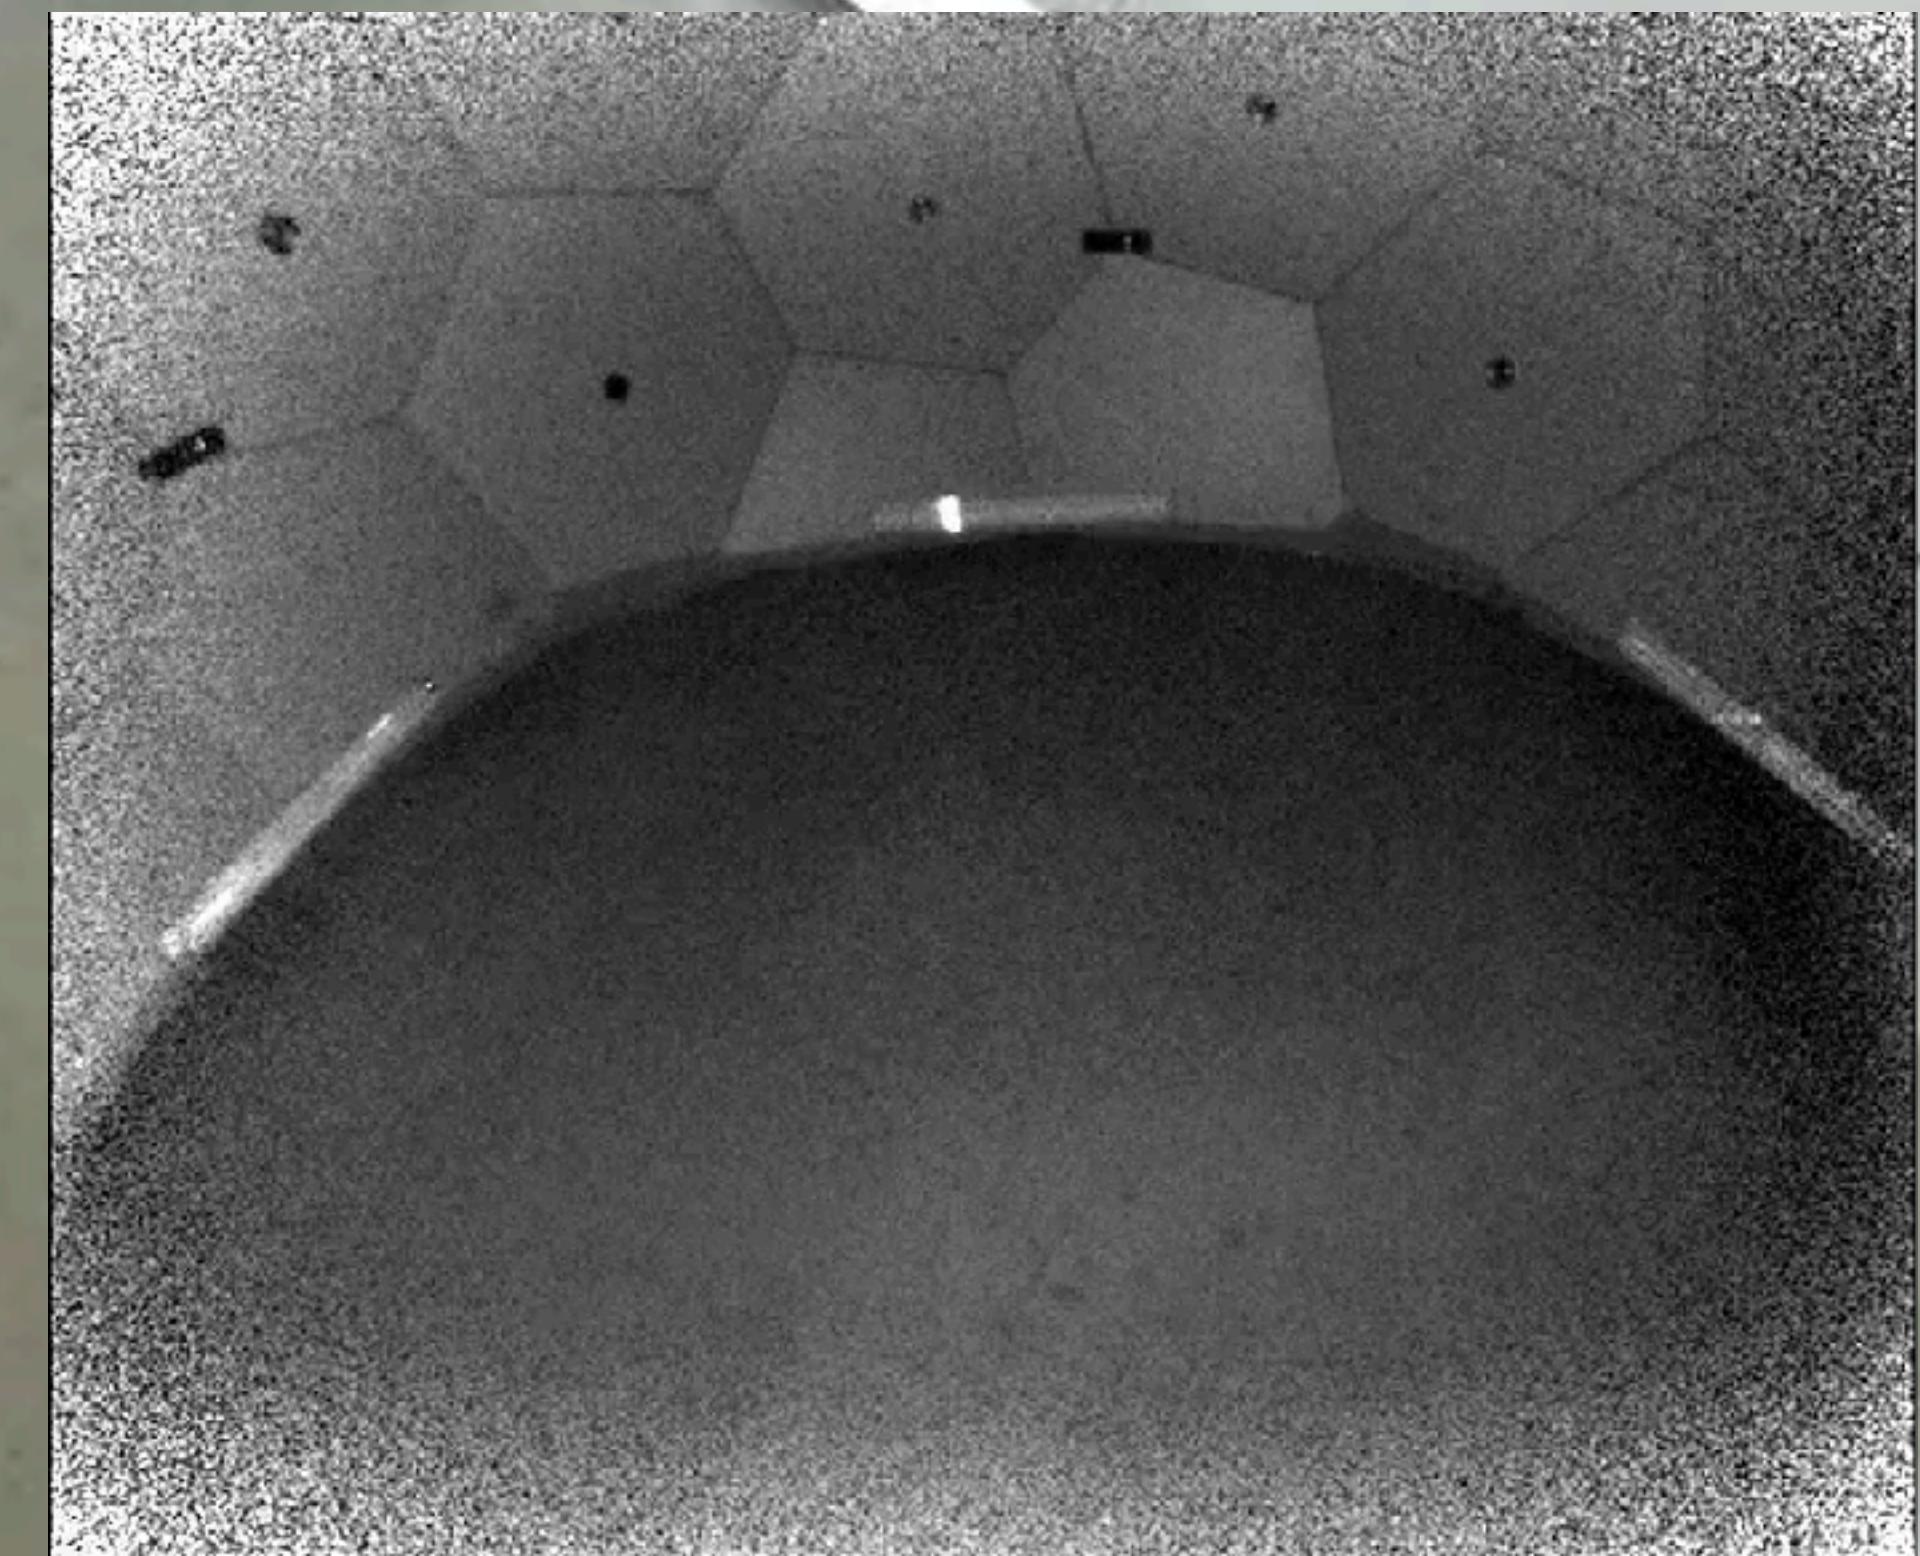

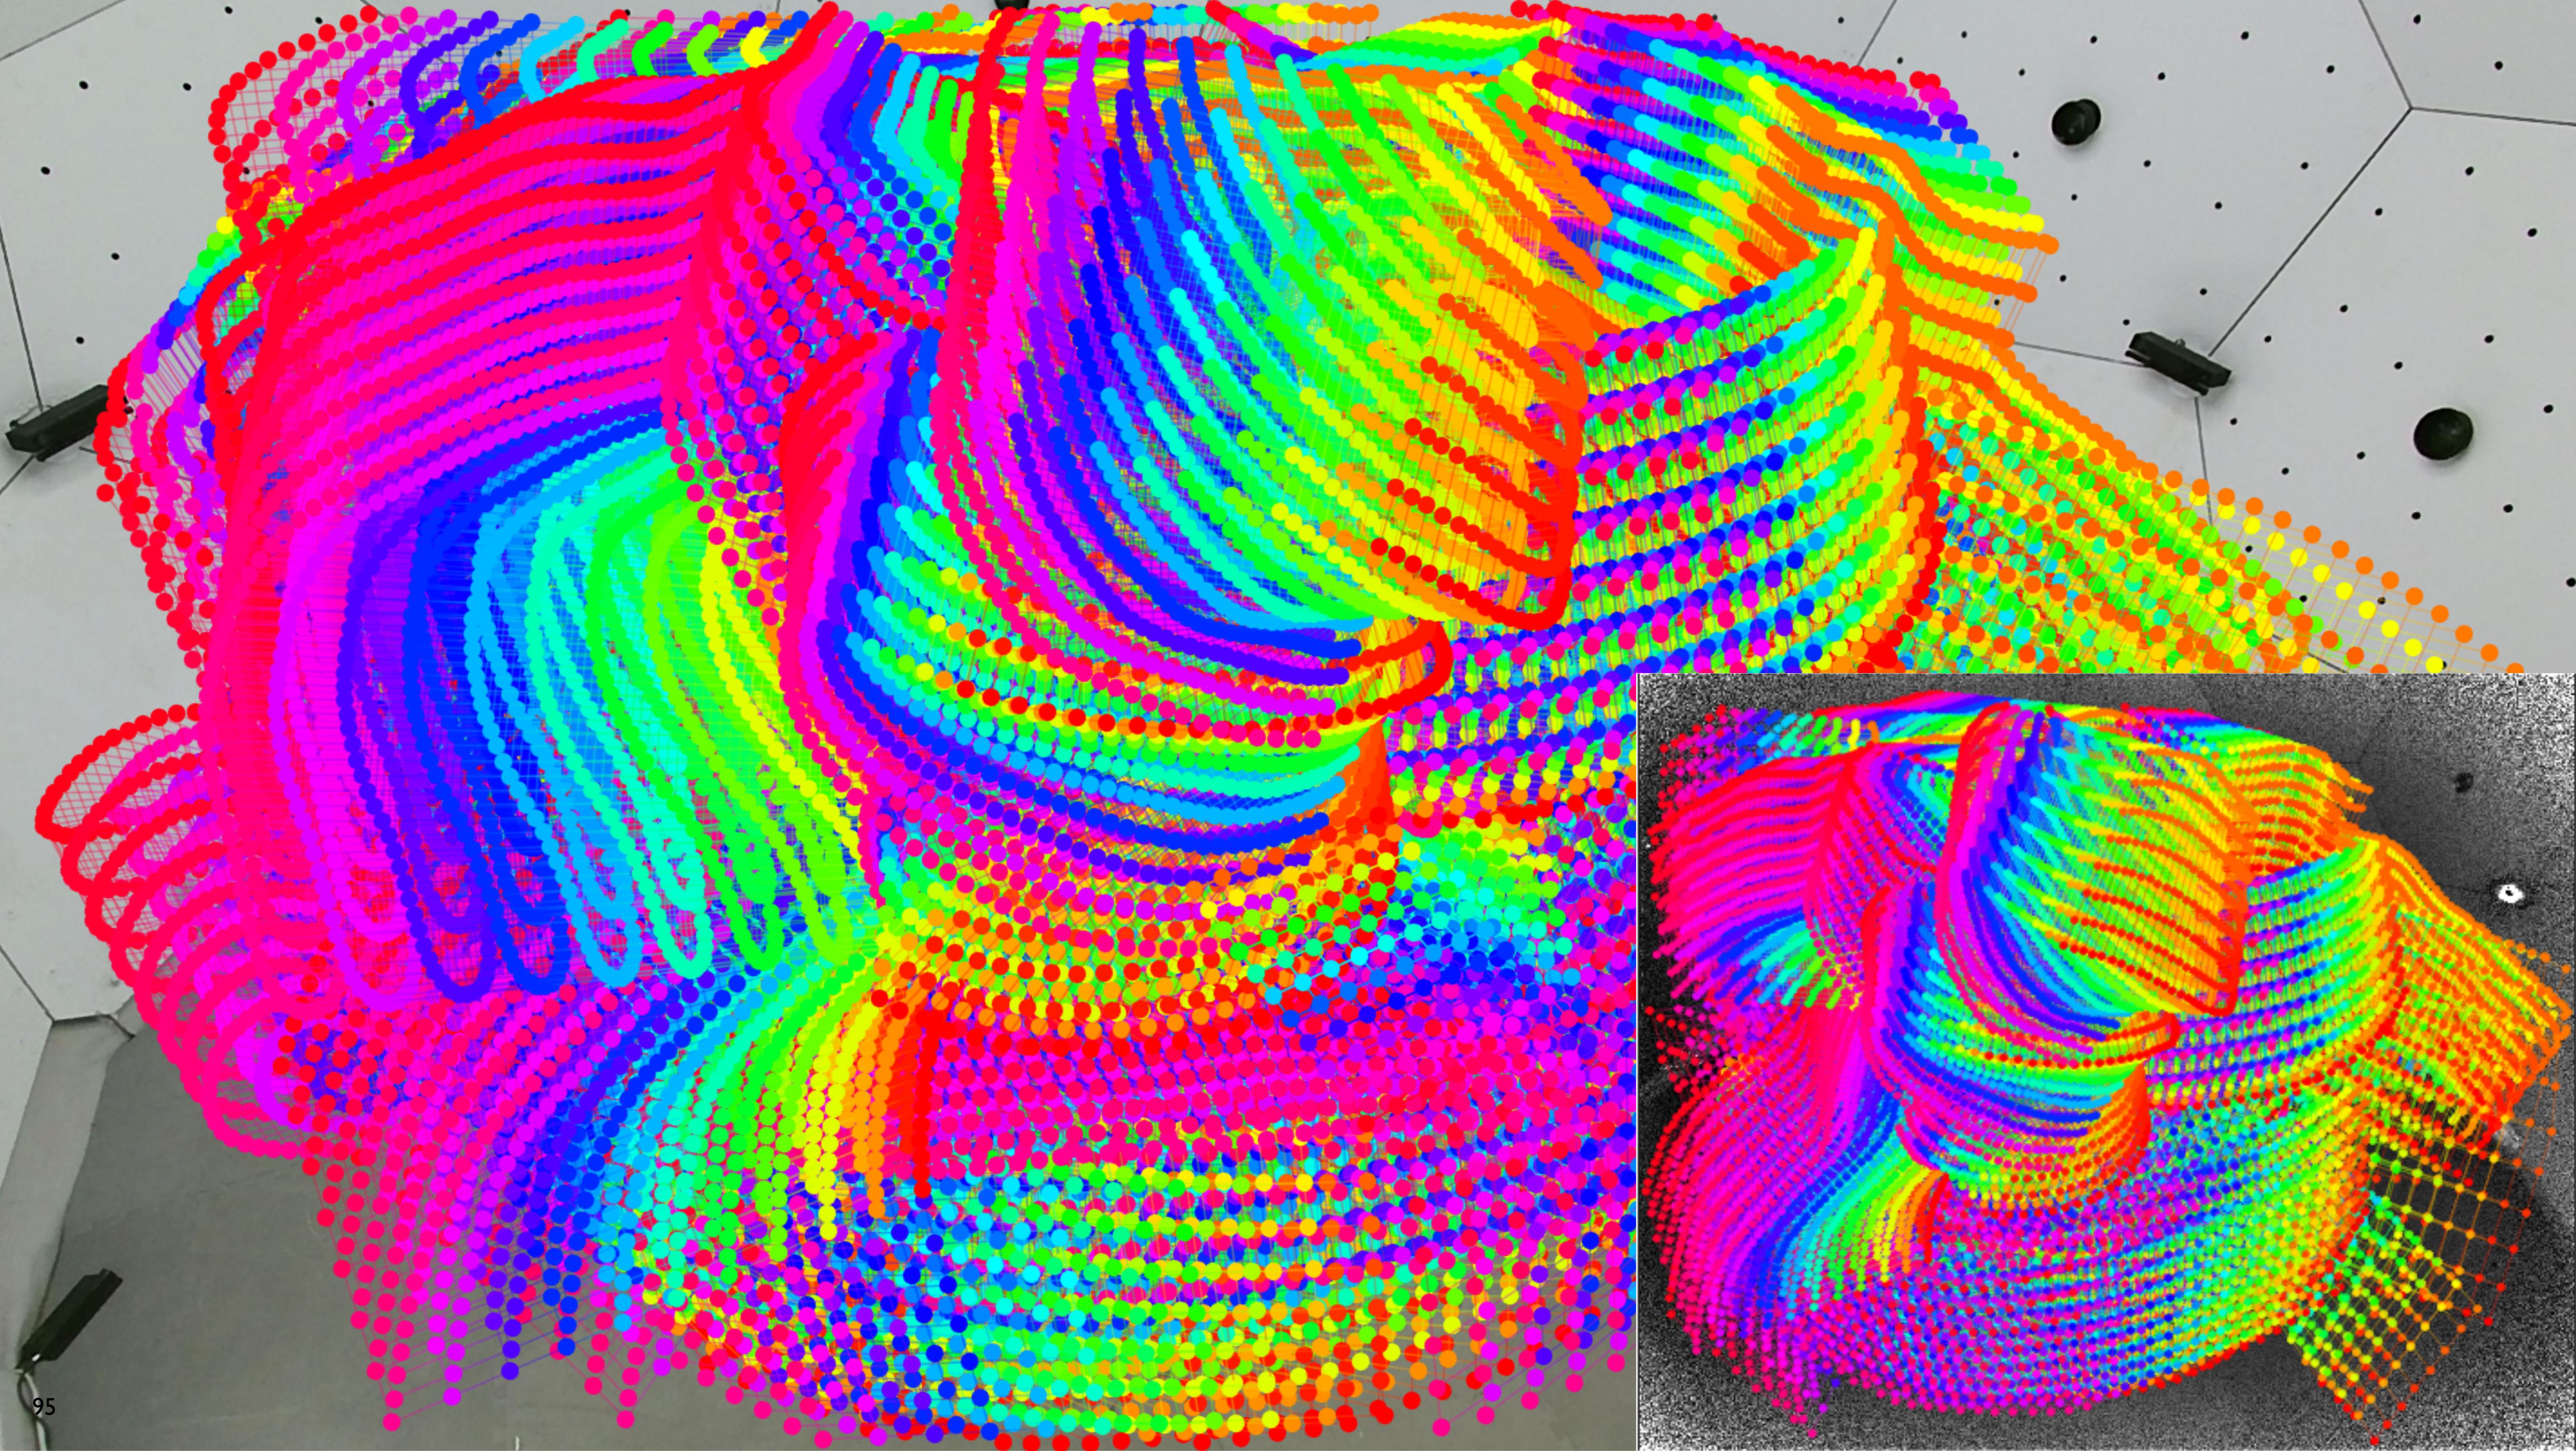

IR

Depth

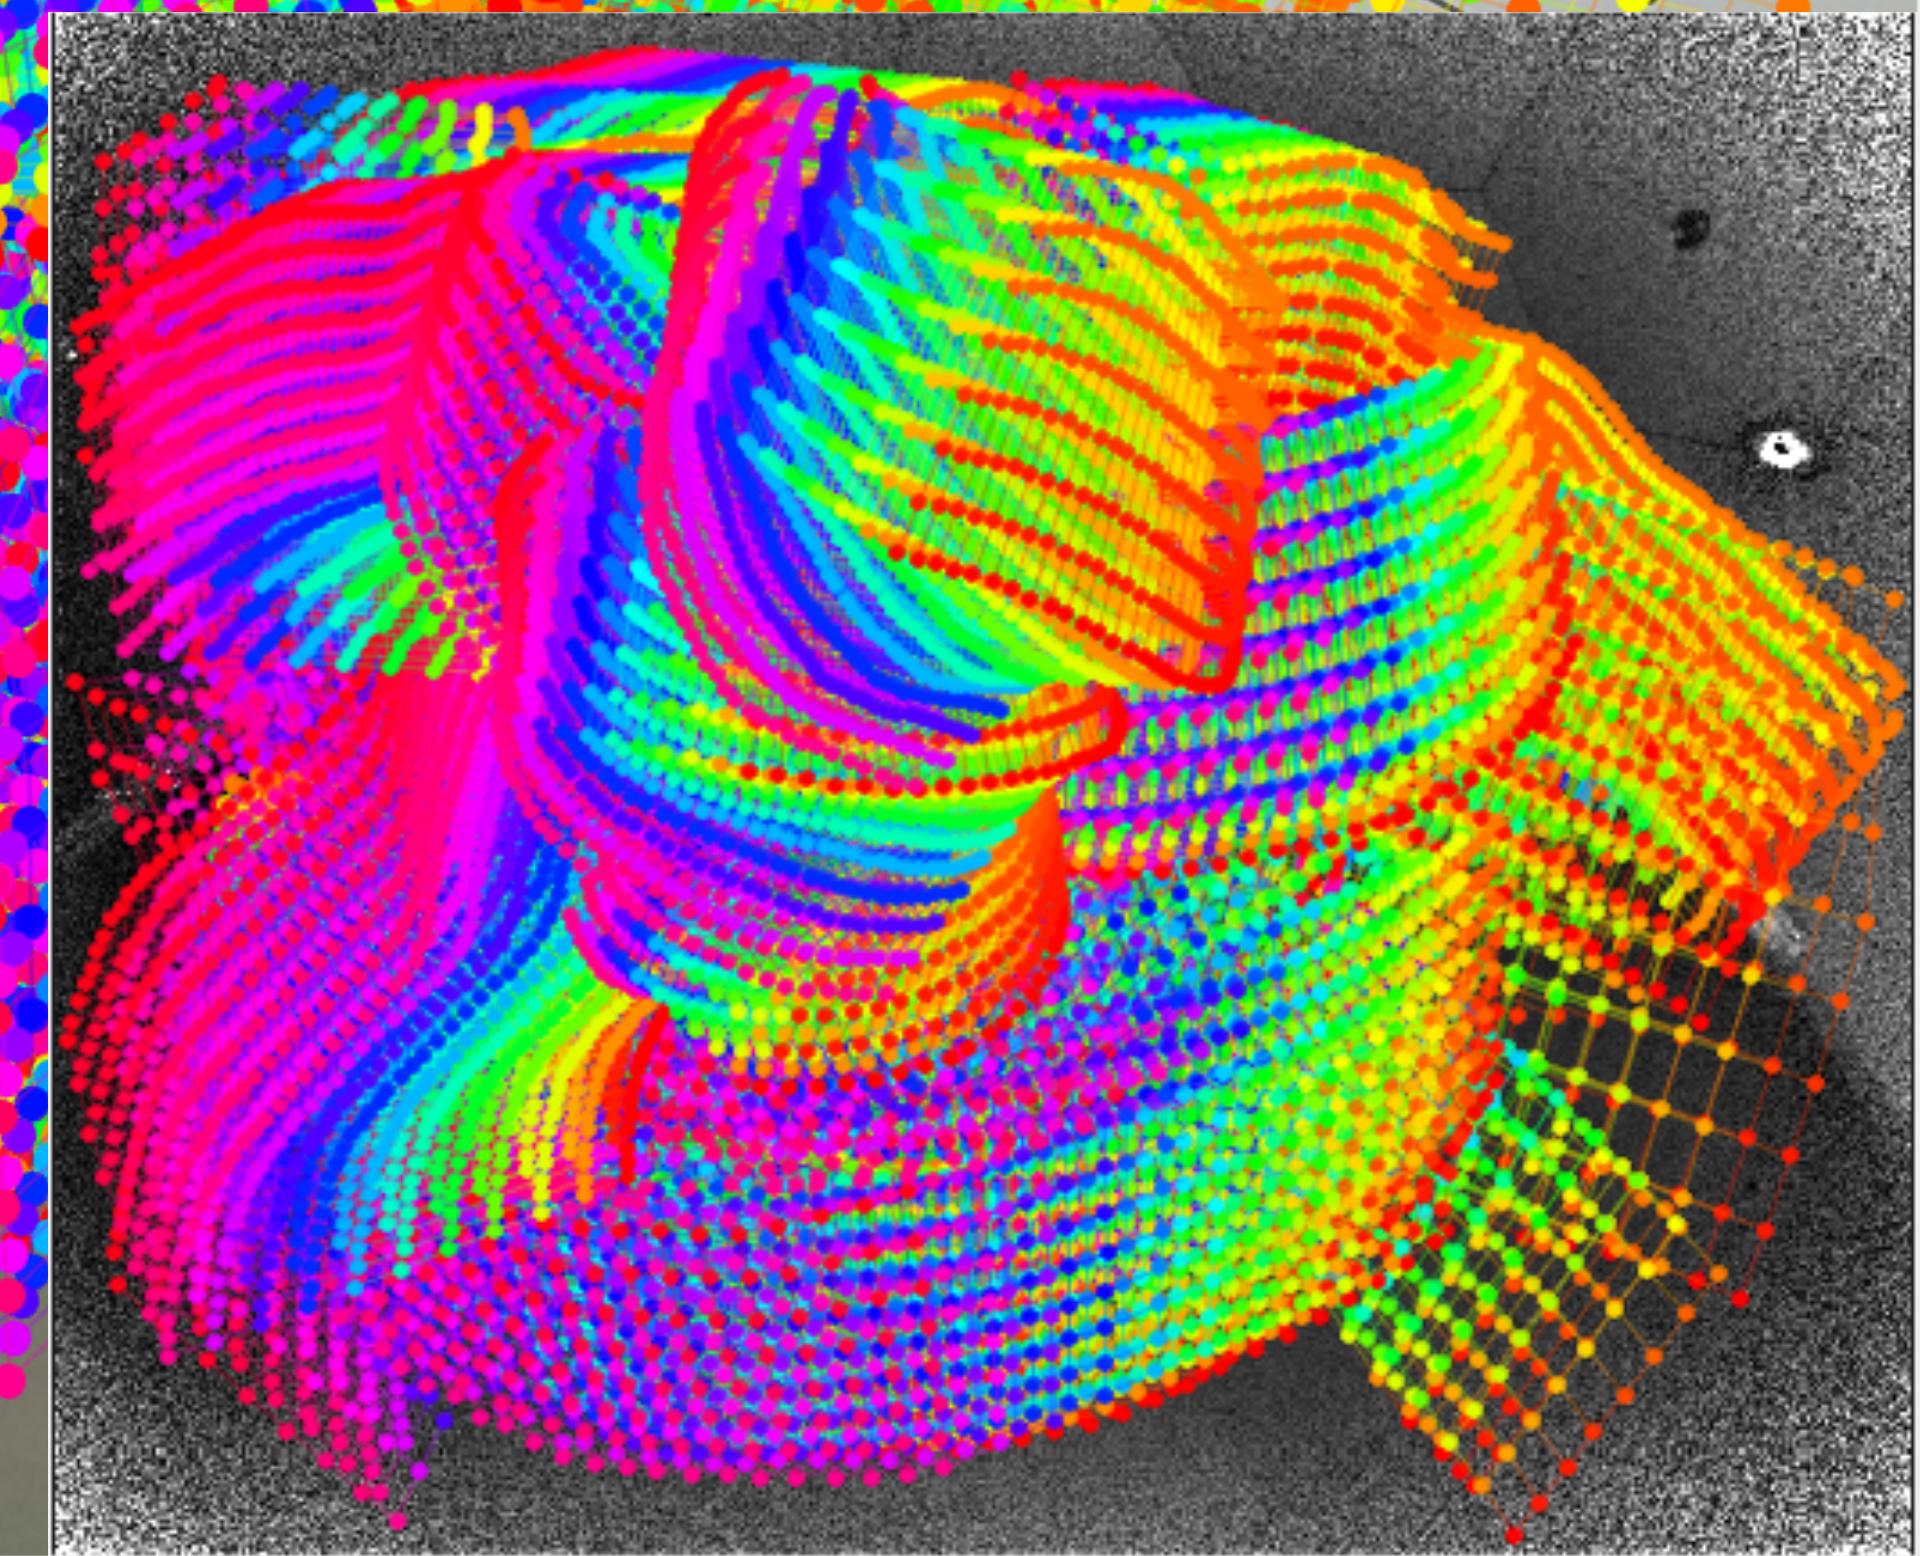

... Back To The Checkerboard

YOU MISSED A SPOT

Kinect Calibration

Take Home Messages

- Combining RGB+IR+Depth will require specialized calibration
- Static checkerboard to calibrate intrinsics and extrinsics between color & depth per Kinect, SfM between sensors
- Multiple RGB-D sensors may produce additional noise and interferences
